Salam, Post ko end tak see more per click kar k achi tarah samja lena hai.
Welcome to the world of crypto.

LECTURE 02

FOR NEW COMERS | KAISE SPOT TRADING KE LIYE COIN SELECT KAREIN?

LECTURE 03

Ultimate Future Trading Guide for Beginners: why I think it's Halal to all terms and definitions included

LECTURE 04

Coin ki selection karna 15 minutes mei profit karney k Liya? Possible? Let's discover

LECTURE 05

Demo ya Paper Trading, kisi exchange per nahie ya tradingview per nahie. Paper per khud write karna hai. phelay course complete karna hai

LECTURE 06

Scalping me long aur short kar ke paisa kaise banayein?
Shuru se end tak step-by-step samajhte hain!

LECTURE 07

Sirf RSI (Relative Strength Index) ka use karke Bitcoin per spot ya futures trading karo aur practice se pro bano.

LECTURE 01

Salam , Post ko end tak see more per click kar k achi tarah samja lena hai .

Welcome to the world of crypto .

Important books if you are into reading otherwise we are using the same methodology in our course too. Meri Source aur mentors yeh hain jis ki waja sey muijhey investment karna aur trading karna ayi.

https://www.amazon.co.uk/Misbehaving.../dp/1846144035

2) There are books like **Adaptive markets by Andew lo and Inside investor's brain by Richard L. Peterson** that I follow too, so my investing and trading methods are based on their theories.

3) Robert Shiller's Irrational Exuberance (for picking the market Top)

Gold aur US Stock k liya (Pakistani cannot use this)

https://etoro.tw/46nOYvb

Crypto seekhnay ke liye **www.waqarzaka.net** par ja kar course section par click karein.

Buy aur sell ke signals kab aate hain aur kahan se milte hain? Check this video **https://www.facebook.com/share/v/19aENRWofu/**?

Featured section par update nahi hoti, lekin Discord mein latest market updates aur signal links share hote

hain. Signal ya notification us waqt milega jab aap Discord ya Telegram par active hongay.
Original Discord aur Telegram links ke liye **www.waqarzaka.net** par ja kar Telegram ka icon ya Discord par click karein aur join karein.
Important Points:
1. Discord par “Monthly” selection par sab milega.
Kisi bhi message ka reply mat dena, aur agar koi bhi Waqar Zaka ya team ka naam le kar message kare, to ignore karein.
2. Agar aap naye hain, to pehlay 1 month tak invest na karein.
Focus karein TradingView seekhnay par aur charts draw karne ki practice karein.
3. Jitna zyada practice kareinge, utna aap apne analysis se buy/sell ka decision lena seekhein ge.
4. Har post ka jawab nahi milega, aur na hi har post approve hoti hai kyun ke members bohot zyada hain.
5. Agar kisi ki friend request ya inbox message aaye, to foran remove kar dein.
Yahaan koi bhi aapka dost nahi hai.
Focus karein learning aur practice par. Blockchain aur trading ka samajh le kar, best of luck!
Welcome to the world of crypto
To learn about crypto, visit **www.waqarzaka.net** and click on the course section.
When do buy and sell signals come, and where can you get them?
https://www.facebook.com/share/v/19aENRWofu/?
Updates are not posted in the Featured section, but latest market updates and signal links are shared on Discord. You will receive signals and notifications only if you are active on Discord or Telegram.

To access the original Discord and Telegram links, go to **www.waqarzaka.net** and click on the Telegram icon or Discord to join.

Key Points:

1. On Discord, select “Monthly” to get all updates. Do not reply to any messages, and if anyone claiming to be Waqar Zaka or his team messages you, ignore them.
2. If you are new, do not invest for the first month. Focus on learning TradingView and practicing chart drawing.
3. The more you practice, the better you’ll get at making buy/sell decisions based on your own analysis.
4. Not every post will be replied to, and not every post gets approved because there are too many members.
5. If you receive any friend requests or inbox messages, remove them immediately.

No one here is your friend.

Stay focused on learning and practicing. Understand blockchain and trading thoroughly. Best of luck!

LECTURE 02

FOR NEW COMERS | KAISE SPOT TRADING KE LIYE COIN SELECT KAREIN?

STEP 1: COIN HUNTING FOR SPOT TRADING

CoinMarketCap par jaake **Top Losers** dhoondhein jo **7 Days (7D)** tab mein dikhaye gaye hain. Yeh coins woh hain jo pichle haftay mein kaafi price lose kar chuke hain, aur inka bounce hone ka potential zyada hota hai. Gain wale coins avoid karein kyunki unka momentum khatam ho sakta hai.

STEPS:

1. **CoinMarketCap Search:**CoinMarketCap website par jaayein aur "Trending Coins" ko **7D Losers** filter karein.
   Example: Screenshot ke mutabiq, PNUT, POPCAT, aur KAS sabse zyada 7D mein giray hain.

2. **Top 3 Losers Analyze Karein:**Har coin ke baare mein research karein (website, use case, aur community activity check karein).
   Example: PNUT ek new meme coin hai jo animal welfare par focus karta hai, aur abhi price gir raha hai lekin trading volume kaafi high hai.

3. **1D Aur 24H Tabs:1D Tab:** Dekhein ke coin ka price short-term mein stabilize ho raha hai ya aur gir raha hai.
   24H Tab: Agar price stable hai ya thoda sa recover kar raha hai, toh buying ka plan banayein.

STEP 2: SPOT TRADING ANALYSIS ON TRADINGVIEW

Ab coin select karne ke baad, TradingView free version par analysis karte hain. Yahan indicators aur support/resistance ka use karte hain taake signal banayein.

SUPPORT AUR RESISTANCE KYA HAI?

- **Support Level:** Yeh woh price hai jahan buyers zyada hotay hain aur price neeche girte hue ruk jata hai. Example: PNUT ka $1.10 ek support level hai kyunki price wahan bounce kar raha hai.
- **Resistance Level:** Yeh woh price hai jahan sellers zyada hotay hain aur price upar jate hue wapas neeche aata hai. Example: PNUT ka $1.35 ek resistance hai.

KAISE USE KAREIN?

1. **Candlestick Chart Samjhein:**Green candles = Price upar ja raha hai (bullish).
   Red candles = Price neeche ja raha hai (bearish).

Example: Agar red candles continuously neeche gir rahi hain aur ek level par ruk jati hain, toh wahan support ho sakta hai.

2. **Support Aur Resistance Banane Ka Tareeqa:**Price chart par dekhein ke price kin points par zyada time ruk raha hai.
   Horizontal lines draw karein wahan jahan candles wapas neeche ya upar jati hain.

INDICATORS FOR SPOT TRADING:

1. **Moving Averages (EMA):**Add **9 EMA** aur **21 EMA** (free account mein 2 EMAs add kar sakte hain).
   Logic: Jab 9 EMA (faster moving average) 21 EMA ke upar ho, toh price bullish hota hai (buying ka signal). Jab neeche ho, toh bearish hota hai (selling ka signal).

2. **RSI (Relative Strength Index):**RSI add karein aur dekhein ke kya price overbought (>70) hai ya oversold (<30).
   Logic: Jab RSI oversold hai, toh buying ka signal ho sakta hai kyunki price recover karega. Overbought hone par selling ka plan karein.

STEP 3: VOLUME AUR PRICE KA RISHTA SAMAJHNA
VOLUME KYA HAI?
Volume dikhata hai ke kitna paisa ya kitni trades ek coin par ho rahi hain. Zyada volume ka matlab hai zyada activity aur price move karne ke chances.

VOLUME AUR CANDLES KA RISHTA:

1. **High Volume + Green Candle:** Price upar jayega kyunki buyers zyada hain.
2. **High Volume + Red Candle:** Price neeche jayega kyunki sellers zyada hain.
3. **Low Volume:** Price stable ya sideways rahega.

LOGIC:

- Jab price support level par ho aur volume zyada ho, toh buyers active hain aur price upar ja sakta hai.
- Jab price resistance par ho aur volume zyada ho, toh selling pressure aayega aur price neeche gir sakta hai.

STEP 4: NEW COINS KE LIYE ANALYSIS KAISE KAREIN?
Naye coins mein data limited hota hai, lekin phir bhi yeh steps use karein:

1. **Support Aur Resistance Find Karein:**Chart par short-term (15-min aur 1-hour) support aur resistance zones identify karein.

Example: PNUT ka $1.10 support aur $1.35 resistance hai.

2. **Indicators Aur Volume Dekhein:** RSI aur EMA ka use karein for trend confirmation.
   Volume ko candles ke saath compare karein jaise upar explain kiya gaya.

3. **Small Trades Karein:** Naye coins mein zyada risk hota hai. Pehle chhoti trades karein aur price movement ko samajhne ka waqt dein.

CONCLUSION:
Spot trading ke liye hamesha losers (7D tab) ko target karein jo ab stabilize ho rahe hain. CoinMarketCap aur TradingView ka logical use karke support/resistance, EMA, RSI aur volume ka analysis karein aur calculated risk lein. Indicators aur price action ke beech connection samajhna zaroori hai, kyunki wahi signal banane ka best tareeqa hai!

LECTURE 03

Ultimate Future Trading Guide for Beginners: why I think it’s Halal to all terms and definitions included -

Warning ; Do not , I repeat do not invest untill you have done minimum three months of Demo otherwise sub Waste hoga -

Future Trading ka Basic Concept

Socho ke tum aur tumhara dost ek cricket match dekh rahe ho. Tumhe lagta hai Pakistan jeetega, aur tumhara dost kehta hai doosri team jeetegi. Tum dono decide karte ho ke jo galat hoga woh doosre ko 100 rupees dega. Future trading mein bhi kuch aisa hi hota hai, magar yahaan apne anadaz ke saath paisay wager (bet) ki tarah lagate ho.

Lekin yahaan hum kisi khilaadi ke upar wager nahi lagate, balke market ke upar apne anadaz ko trade ki form mein lagate hain. Yani, tum yeh soch kar trade lete ho ke price upar jayegi ya neeche aur is par tum profit bana sakte ho.

Futures trading complex hai, is mein bohot si terms aur rules hain jo samajhne padte hain. Yahan har term ko detail mein aise samjhaenge ke ek teenager bhi asaani se samajh sake.

Types of Contracts in Futures Trading

1. Perpetual Contracts

• Yeh wo contracts hain jo kabhi expire nahi hote. Matlab, tum jab tak chaho hold kar sakte ho. Lekin har kuch ghanton mein funding fees lagti hain, jo tumhe ya tumhari position hold karne walay doosray logon ko pay karna padta hai.

2. Fixed-Term Contracts

• Fixed-term contracts ki ek expiry date hoti hai. Matlab, ye contracts ek fixed time par end ho jate hain, aur us waqt tumhara profit ya loss lock ho jata hai. Aksar log

fixed-term contracts ko short-term events ke liye use karte hain.

3. Coin-M Futures Contracts

• Coin-M contracts wo hote hain jo cryptocurrency (jaise Bitcoin ya Ethereum) mein settle hote hain. Iska matlab yeh hai ke agar tum profit ya loss karte ho, woh directly cryptocurrency mein hota hai, na ke USD ya kisi aur stable currency mein.

• Example: Agar tumne Bitcoin ke Coin-M futures par long position li aur market tumhare favor mein gai, toh tumhara profit Bitcoin mein add hoga. Aur agar loss ho gaya toh woh bhi Bitcoin mein hoga.

4. USDT-M Futures Contracts

• Ismein tum USDT (Tether) use karte ho aur tumhara profit ya loss bhi USDT mein hota hai. Iska fayda yeh hai ke tumhara profit ya loss stable reh sakta hai aur tumhe cryptocurrency ke fluctuation se zyada farq nahi padega.

Key Terms Aur Unki Asan Explanation

1. Leverage (10x, 50x, 100x, etc.)

• Leverage ka matlab hai ke tum apne thode paisay se zyada badi position le sakte ho. Socho agar tumhare paas 100 rupees hain aur tum 10x leverage use karte ho, toh tumhare paas 1000 rupees ki trading power ho jati hai. Yeh aise hi hai ke tumne ek dost se 900 rupees uaar liye taake bada paisa laga sako.

• Example: Tumhare paas 500 rupees hain aur tum 20x leverage lagate ho, toh tum 10,000 rupees ki trade kar sakte ho. Magar yaad rakho, jitna leverage badhoge, risk bhi utna hi badh jata hai. Agar market tumhare against chali gayi, toh tum apne poore paisay bhi lose kar sakte ho.

2. Cross aur Isolated Margin

• Cross Margin: Ismein tum apne poore wallet ko risk mein daal dete ho. Agar trade galat jaye toh poora wallet empty ho sakta hai.

• Isolated Margin: Tum specific trade ke liye sirf wo paisa risk mein daalte ho jo us trade ke liye allocate kiya hai. Baqi paisa safe rehta hai.

3. Stop Loss aur Take Profit

• Stop Loss: Tum apna loss control karne ke liye ek specific point set kar sakte ho jahan trade close ho jata hai.

• Take Profit: Tumne agar apna desired profit achieve kar liya, toh take profit set karke trade close kar sakte ho taake profit lock ho jaye.

4. Market Order aur Limit Order

• Market Order: Tum instantly current price par trade karte ho.

• Limit Order: Tum apna desired price set karte ho aur jab market us price par pohanchti hai toh tumhara order execute ho jata hai. Yeh tumhe apne budget mein rehte hue trade karne mein help karta hai.

5. Long aur Short Positions

• Long Position: Tumhe lagta hai ke price upar jayegi toh tum buy karte ho.

• Short Position: Tumhe lagta hai ke price neeche jayegi toh tum pehle sell karte ho aur phir baad mein wapas buy kar lete ho jab woh sasta hota hai. Yeh bilkul aise hi hai jaise tum apne dost se kehte ho ke “mere paas yeh cheez hai” aur jab wo cheez sasti ho jaye toh woh wapas le lete ho.

6. Hedge Mode

• Is mode mein tum long aur short trades simultaneously hold kar sakte ho. Yeh tumhe risk ko control mein rakhne aur flexibility dene ke liye hota hai.

7. Funding Fee aur Funding Rate

• Perpetual contracts mein funding fee lagti hai jo long aur short position holders ke darmiyan adjust hoti hai. Funding rate positive ho toh long wale short walon ko pay karte hain aur vice versa.

8. Order Book aur Percentage Change (% Change)

• Order Book mein tum dekh sakte ho ke kitne log kis price par buy ya sell karna chahte hain.

• Percentage Change tumhe batata hai ke price mein kitna change aya hai.

9. Mark Price aur Liquidation Price

• Mark Price ek fair price hai jo exchange broader market data ko dekh kar set karta hai.

• Liquidation Price wo point hai jahan tumhara trade automatically close ho jata hai kyunke tumhare paas aur loss handle karne ka balance nahi bachta.

10. Auto-Deleveraging (ADL)

• Kabhi kabhi jab market bohot volatile hoti hai toh exchange kuch trades ko automatically close kar deta hai taake market stable rahe. Yeh zaroori hai beginners ko samajhne ke liye, taake woh pata rakh sakte hain ke kuch conditions mein unka trade control se bahar ho sakta hai.

Futures Trading Mein Profits Aur Loss Kaise Hotay Hain?

Agar tum leverage ke saath trade kar rahe ho aur market tumhare against chali gayi, toh tumhara trade liquidate ho sakta hai. Liquidation ka matlab hai ke tumhara invested paisa khatam ho gaya hai. Magar yaad rakho, tumhe exchange ko aur paisay wapis nahi dene padte, sirf tumhara invested amount khatam hota hai. Yeh risk hamisha yaad rakho ke leverage jitna zyada hoga, risk bhi utna hi high hoga.

Islamic Perspective on Futures Trading by Waqar Zaka

Islam mein do bade concepts hain jo trading ko samajhne mein help karte hain:

1. Gharar (Ambiguity): Prophet Muhammad (PBUH) ne farmaya: “Avoid transactions which involve ambiguity” (Sahih Muslim). Gharar ka matlab hai ke aap aise risk lo jo bina samjhe ho. Agar aap bina samajhe trading kar rahe ho, toh yeh Gharar kehlati hai aur Islam mein yeh haram hai.

2. Interest aur Exploitation ka Concept: Surah Al-Baqarah (2:279) mein aata hai, “If you do not, then be warned of war from Allah and His Messenger.” Yeh ayat un logon ke liye hai jo doosron ko loan de ke ya unki majboori ka faida uthate hain. Futures trading mein interest ya exploitation tab hota hai jab aap kisi ko exploit karte hain. Lekin agar aap apne skill aur understanding ke basis par trading kar rahe hain toh aap exploit nahi kar rahe.

Waqar Zaka ka concept : Agar aap trading samajh kar aur analysis ke saath karte hain, toh ismein Gharar nahi aati aur aap exploitation nahi karte. Waqar Zaka ke mutabiq, agar aap har risk ko samajhte hue aur iske sab terms par control karte hue trade karte hain toh yeh halal ho sakta hai.

Islam ke according, knowledge aur responsibility ke saath ki gayi trade halal hoti hai. Futures trading ek skill-based aur calculated investment ho sakti hai agar aap iske sab terms ko samajh ke trading mein aate hain.

Here’s the rest of the checklist to complete the safe trading guide:

Checklist for Safe Future Trading

1. Market Analysis karo aur trend ko pehle samjho. Analysis ke baghair trade karna risk hai aur bina soch-samajh risk lena Islam mein haram hai.

2. Leverage aur Margin ko deeply understand karo aur apne risk ko control mein rakho. Leverage ke saath bade profits ka chance hota hai, lekin risk bhi utna hi zyada hota hai.

3. Stop Loss aur Take Profit points set karo taake tumhara profit secure aur loss limited ho. Yeh tumhe emotions mein aa kar galat decisions lene se bacha sakta hai.

4. Cross aur Isolated Margin ka use karo apne risk ko control mein rakhne ke liye. Cross margin mein poora balance risk mein aata hai jabke isolated margin mein sirf specific trade ka amount risk mein rehta hai.

5. Market aur Limit Orders ko samajh kar use karo taake tum apne budget mein aur apne desired price par trade kar sako.

6. Funding Fee aur Funding Rate par nazar rakho, agar tum perpetual contracts mein lamba trade rakhna chahte ho. Funding rate decide karta hai ke long ya short position holders kis taraf se fee pay karenge.

7. Logical Decision-Making: Trade mein hamesha logical aur analysis par based decisions lo. Emotions se control rehna aur kisi aur ke influence mein aane se bacha na zaroori hai.

8. Self-Education: Hamesha apne skills ko improve karo aur new strategies seekhne ki koshish karo taake tum better analysis aur informed decisions le sako.

ULTIMATE FUTURES TRADING GUIDE: WHY IT CAN BE HALAL IF DONE RESPONSIBLY (ROMAN URDU)
WARNING: SEEK KNOWLEDGE FIRST!
Islam har kaam mein knowledge aur samajh ka hukam deta hai. Agar aap futures trading samajhne se pehle shuru karenge, toh aap gharar aur gambling mein par sakte hain, jo Islam mein haram hai. Demo trading kam az kam **3 months** zarur karein aur market ka full analysis seekhein. Tabhi yeh ek **calculated skill-based investment** ban sakti hai.

FUTURES TRADING KA CONCEPT (SIMPLIFIED)
Socho ke tum aur tumhara dost ek cricket match dekh rahe ho. Tumhe lagta hai ke Pakistan jeetega aur tumhara dost kehta hai doosri team jeetegi. Tum dono decide karte

ho ke jo galat hoga, woh doosray ko 100 rupees dega. Futures trading mein bhi yahi concept hai.

Lekin yahaan wager kisi khilaadi par nahi hota, balkay market ke price par hota hai. Tum yeh trade karte ho ke price upar jayegi (long) ya neeche (short), aur agar tumhara analysis sahi ho, toh tum profit kama sakte ho.

ISLAMIC PERSPECTIVE: HALAL YA HARAM?
Islam mein financial contracts tab tak halal hain jab tak:

1. **No Riba (Interest):** Sood lena/dena haram hai (Surah Al-Baqarah, 2:275-279).
2. **No Gharar (Uncertainty):** Excessive ambiguity or lack of understanding haram hai (Sahih Muslim, Hadith 1513).
3. **No Qimar/Maysir (Gambling):** Speculative risk without knowledge gambling kehlata hai (Surah Al-Maidah, 5:90).

QURANIC JUSTIFICATION OF CONTRACTS
Islam mein contracts allowed hain agar dono parties ki **clear understanding** aur **mutual consent** ho:

- **Surah An-Nisa (4:29):** "Do not consume one another's wealth unjustly, but only [in lawful] business by mutual consent."
- Yani, agar aapki trade ek **agreed-upon contract** ke zariye ho aur sab kuch clear ho, toh yeh lawful hai.

HADITH ON GHARAR
Gharar ka matlab hai “uncertainty ya ambiguity.” Prophet Muhammad (PBUH) ne farmaya:

- **"Do not buy fish in the sea, for it is gharar"** (Sunan Abi Dawood, 3503).
- Yani, koi aisi cheez na khareedo jo unclear ho ya jisme samajh na ho.

Logic: Agar aap futures trading se pehle sab kuch samajh lete hain—market, risk, leverage, aur contracts—aur calculated decisions lete hain, toh yeh gharar nahi rahta.

EXCHANGE LEVERAGE SYSTEM EXPLAINED

EXCHANGE PAISA KAHAN SE LAATI HAI?

1. Exchange ka leverage **virtual liquidity** ke zariye aata hai. Jab aap leverage lete hain (10x, 100x), exchange ek pool create karta hai jo alag-alag traders ke deposits par based hota hai.
2. Exchange ka actual paisa spot market aur apne liquidity providers (LPs) se hota hai.
3. **Virtual Money:** Yeh paisa actual nahi hota; yeh ek system ke zariye allocated hota hai jahan aapka risk limited hota hai to your collateral (jo margin aap lagate hain).

LIQUIDATION KE BAAD EXCHANGE AAPKE PEECHAY KYON NAHI AATI?

1. Jab aap liquidate hote hain, exchange sirf aapka invested margin rakhti hai.
2. Yeh **loan** nahi hota jaise bank ka loan, kyun ke:Exchange ko aapke upar interest ya additional paisa nahi lena. Sood (interest) sirf tab hota hai jab repayment ka clause ho.

FUNDING RATE HALAL HAI YA HARAM?

1. **Funding Rate Ka Purpose:** Funding rate exchange use karta hai taake **spot price aur futures price balance mein rahein.**
2. Yeh rate **interest nahi** hai. Yeh ek adjustment hai jo long aur short traders ke darmiyan hoti hai:Agar funding rate positive hai, long position holders short holders ko pay karte hain.
   Agar negative hai, short position holders long holders ko pay karte hain.
3. **Logic:** Funding rate ek tarah ka operational cost hai jo gharar ya riba mein nahi aata.

BETTING KA SHUBA: FUTURES GAMBLING HAI YA NAHI?
LOGIC AGAINST GAMBLING

Log kehte hain ke futures trading mein aapka profit kisi doosre ka loss hai, toh yeh betting hai. Lekin:

1. **Har Business Mein Profit Aur Loss Hota Hai**:Aap ek dukaan chalate hain. Agar kisi ne apni needs galat assess kar ke aapka maal mehenga liya, toh kya yeh betting hai? Nahi.
   Real estate mein, agar ek insaan ek property mehengi bechta hai, toh dusre ka nuksan hota hai.

2. Futures trading ek **zero-sum game** ho sakta hai, lekin jab tak aapka decision logical aur calculated ho, yeh gambling nahi.

PHYSICAL POSSESSION KA MASLA

Islam physical possession ka concept tab lagata hai jab koi cheez tangible ho. Digital economy mein:

1. **Contracts Allowed Hain:** Islam mein “contracts” ki zarurat hoti hai, na ke physical possession ki:**Example:** Online domain names, mobile balance, ya even cryptocurrencies ki ownership digital hoti hai.

2. **Surah Al-Baqarah (2:282):** "When you contract a debt for a specified term, write it down..."Iska matlab hai ke agar ek proper contract ho aur ownership defined ho, toh yeh halal hai.

HALAL JUSTIFICATION OF FUTURES TRADING

Agar futures trading mein yeh conditions poori hoti hain, toh yeh halal ho sakti hai:

1. **Knowledge and Intent:** Aapko pata ho ke aap kyon long ya short kar rahe hain.
2. **Risk Management:** Stop loss aur leverage samajh kar use karein.
3. **No Gharar:** Saari terms clear ho aur aap speculation ke bajaye analysis ke saath kaam karein.

EXAMPLES OF HALAL BUSINESSES WHERE OTHERS LOSE

1. Stock Market: Jab ek investor profit kamata hai, dusra loss karta hai.
2. Real Estate: Jab ek buyer high price pay karta hai, seller profit kamata hai.
3. Shops: Jab maal mehenga bika, buyer ka cost badhta hai, aur seller profit kamata hai.

CHECKLIST FOR HALAL FUTURES TRADING

1. Kam az kam 3 mahine demo trading karein aur market ko deeply samjhein.
2. Stop loss aur risk management ka strict use karein.
3. Kabhi speculative ya emotional decisions na lein.
4. Logical aur skill-based approach rakhein.

ENDING NOTE

Islam mein har cheez ka focus **knowledge aur fairness** par hai. Agar aap bina samjhe kaam karte hain, toh yeh haram hai. Lekin agar aap apne risk ko samajh kar aur responsibility ke saath trade karte hain, toh yeh ek halal aur ethical kaam ban sakta hai.

Disclaimer: Yeh guide ek educational resource hai. Har insaan apne level par Islamic scholars se mashwara zarur kare.

4o

YOU SAID:

write everything again, and explain Funding rate in more details by giving local paksitani example , and also write what does positive and negative funding rate means and what impact it can have on market

CHATGPT SAID:

ULTIMATE FUTURES TRADING GUIDE: WHY IT CAN BE HALAL IF DONE RESPONSIBLY (ROMAN URDU)

WARNING: SEEK KNOWLEDGE FIRST!
Islam mein bina samajh ke kisi bhi kaam mein invest karna manaa hai. Futures trading ko samajhne ke liye kam az kam **3 months demo trading** zarur karein aur market ka full analysis seekhein. Tabhi yeh ek **calculated skill-based investment** ban sakti hai. Bina samajh ke shuru karna gambling aur gharar kehlata hai, jo Islam mein haram hai.

FUTURES TRADING KA CONCEPT (SIMPLIFIED)
Socho ke tum aur tumhara dost ek cricket match dekh rahe ho. Tumhe lagta hai ke Pakistan jeetega aur tumhara dost kehta hai doosri team jeetegi. Tum dono decide karte ho ke jo galat hoga, woh doosray ko 100 rupees dega. Futures trading mein bhi yahi concept hai.

Lekin yahaan wager kisi khilaadi par nahi hota, balkay market ke price par hota hai. Tum yeh trade karte ho ke price upar jayegi (long) ya neeche (short), aur agar tumhara analysis sahi ho, toh tum profit kama sakte ho.

ISLAMIC PERSPECTIVE: HALAL YA HARAM?
Islam mein financial contracts tab tak halal hain jab tak:

1. **No Riba (Interest):** Sood lena/dena haram hai (Surah Al-Baqarah, 2:275-279).
2. **No Gharar (Uncertainty):** Excessive ambiguity or lack of understanding haram hai (Sahih Muslim, Hadith 1513).
3. **No Qimar/Maysir (Gambling):** Speculative risk without knowledge gambling kehlata hai (Surah Al-Maidah, 5:90).

QURANIC JUSTIFICATION OF CONTRACTS
Islam mein contracts allowed hain agar dono parties ki **clear understanding** aur **mutual consent** ho:

- **Surah An-Nisa (4:29):** "Do not consume one another's wealth unjustly, but only [in lawful] business by mutual consent."
- Agar aapka trade ek clear contract ke zariye ho aur mutual agreement ke saath ho, toh yeh lawful hai.

HADITH ON GHARAR

Gharar ka matlab hai “uncertainty ya ambiguity.” Prophet Muhammad (PBUH) ne farmaya:

- **"Do not buy fish in the sea, for it is gharar"** (Sunan Abi Dawood, 3503).
- Koi aisi cheez na khareedo jo unclear ho ya jisme samajh na ho.

Logic: Agar aap futures trading ko samajhne ke baad karein—market ka risk, leverage, aur contracts ki clarity ke saath—toh yeh gharar nahi rahta.

FUNDING RATE EXPLAINED WITH LOCAL EXAMPLE

FUNDING RATE KYA HAI?

Funding rate ek mechanism hai jo **futures market** aur **spot market** ke prices ko balance karne ke liye use hoti hai. Futures ka price kabhi kabhi spot price (actual market price) se zyada ya kam hota hai. Funding rate iss gap ko adjust karta hai.

POSITIVE FUNDING RATE

- Jab **futures ka price spot price se zyada** ho, toh funding rate positive hoti hai.
- Iska matlab: **Long position holders short position holders ko pay karte hain.**

NEGATIVE FUNDING RATE

- Jab **futures ka price spot price se kam** ho, toh funding rate negative hoti hai.
- Iska matlab: **Short position holders long position holders ko pay karte hain.**

LOCAL PAKISTANI EXAMPLE

Socho ke tum ek dukan chalate ho jahan aata 150/kg milta hai. Tumhare dost ne futures market mein trade kiya hai ke aata ka price 200/kg ho jayega. Futures ka price 200/kg hai, lekin asal market mein (spot price) abhi bhi 150/kg hai.

1. **Positive Funding Rate Situation:** Futures price zyada hai (200/kg), lekin asli market ka price (150/kg) neeche hai.
   Futures price zyada hone ka matlab hai log price ke barhne ki umeed kar rahe hain.
   Tumhare dost ko apni position hold karne ke liye **long position ka extra paisa short position holders ko dena padega** taake price balance ho.

2. **Negative Funding Rate Situation:** Futures price kam ho gaya (100/kg), lekin asal market ka price (150/kg) zyada hai.
   Futures price neeche hone ka matlab hai log price ke girne ki umeed kar rahe hain.
   Tumhare dost ki short position ko **long position holders se paisa milega.**

FUNDING RATE KA IMPACT ON MARKET

1. **Positive Funding Rate:** Long positions expensive ho jati hain.
   Traders kam leverage use karte hain ya apne trades band karte hain, jo price ko neeche laata hai.

2. **Negative Funding Rate:** Short positions expensive ho jati hain.
   Traders long positions mein shift hote hain, jo price ko barhata hai.

Logic: Funding rate spot aur futures price ko match karne ka tool hai, aur yeh gharar ya interest ke zariye nahi hota. Yeh ek **market balancing mechanism** hai.

LEVERAGE AUR EXCHANGE KA SYSTEM
EXCHANGE PAISA KAHAN SE LAATI HAI?

1. **Leverage Ka Source:** Jab aap leverage lete hain, exchange aapka collateral use karta hai aur liquidity pool create karta hai.
   Yeh paisa **virtual allocation** hota hai, jo exchange ke

deposits aur traders ki margin positions se balance hota hai.

2. **Liquidation Ke Baad:**Exchange sirf aapka collateral rakhta hai. Jab aapki position liquidate hoti hai, aapka loss wahi tak limited hota hai.
   Yeh **loan system** nahi hai jisme aapse recovery hoti hai, jaise credit card ka interest.

BETTING KA SHUBA: FUTURES GAMBLING HAI YA NAHI?

LOGIC AGAINST GAMBLING

Log kehte hain ke futures trading mein aapka profit kisi doosre ka loss hai, toh yeh betting hai. Lekin:

1. **Har Business Mein Profit Aur Loss Hota Hai**:Aap ek dukaan chalate hain. Agar kisi ne apni needs galat assess kar ke aapka maal mehenga liya, toh kya yeh betting hai? Nahi.
   Real estate mein, agar ek insaan ek property mehengi bechta hai, toh dusre ka nuksan hota hai.

2. Futures trading ek **zero-sum game** ho sakta hai, lekin jab tak aapka decision logical aur calculated ho, yeh gambling nahi.

PHYSICAL POSSESSION KA MASLA

Islam physical possession ka concept tab lagata hai jab koi cheez tangible ho. Digital economy mein:

1. **Contracts Allowed Hain:** Islam mein “contracts” ki zarurat hoti hai, na ke physical possession ki:**Example:** Online domain names, mobile balance, ya even cryptocurrencies ki ownership digital hoti hai.

2. **Surah Al-Baqarah (2:282):** "When you contract a debt for a specified term, write it down..."Iska matlab hai ke agar ek proper contract ho aur ownership defined ho, toh yeh halal hai.

CHECKLIST FOR HALAL FUTURES TRADING

1. Kam az kam 3 mahine demo trading karein aur market ko deeply samjhein.
2. Stop loss aur risk management ka strict use karein.
3. Kabhi speculative ya emotional decisions na lein.
4. Logical aur skill-based approach rakhein.

ENDING NOTE

Islam mein har cheez ka focus **knowledge aur fairness** par hai. Agar aap bina samjhe kaam karte hain, toh yeh haram hai. Lekin agar aap apne risk ko samajh kar aur responsibility ke saath trade karte hain, toh yeh ek halal aur ethical kaam ban sakta hai.

Disclaimer: ISSUE FATWA DENA WALAY KA NAHIE FATWA LENAY WALAY KA HAI , SAWAL HI GALAT ANDAZ MEI POCHO GAEY TU THEEK ANSWER KESAY ?

Ending Note

Futures trading profitable ho sakta hai agar aap seekhne aur samajhdari se kaam lete ho. Bina risk samjhe ya bina knowledge ke trade karna Gharar mein aata hai aur Islam mein ye haram hai. Waqar Zaka ke hisaab se, agar aap apni skills aur knowledge ke saath calculated aur responsible trading karte ho toh yeh Islam ke mutabiq halal ho sakti hai.

Islam me yeh clear guidance hai ke exploitation aur bina samjhe risk lena avoid kiya jaye. Lekin agar aap trading ko ek calculated aur skill-based investment ki tarah treat karte ho, toh ye ek responsible aur ethical approach ban sakta hai.

LECTURE 04

Coin ki selection karna 15 minutes mei profit karney k Liya ? Possible ? Let’s discover .
Tum waqar zaka Nahie | tum , TUM ho . Discover your style . Eik Dum new ho ? Yaad Rakhine , Waqar Zaka ki responsibility Tumhara Paisa bana uski responsibility hai difficult hard method ko easy word mei samina ko internet per Kis jaga Nahie milta. Samja kar profit ya loss Tumhara Naseeb
Acha suno, bhai log! Tumhe kuch nahi aata, trading ka koi experience nahi, lekin scalping ka shauk hai? Matlab tum chahtay ho paisa banayein tez aur asaan tareeke se lekin bina samjhe trade karoge toh tumhara hal wohi hoga jo Rashid Latif ka misfield ke baad hota tha: “Pagal hai yeh banda?”
Scalping koi “choti choti khushiyan” wala scene nahi hai. Yeh serious kaam hai, discipline aur plan ke saath. Chalo, step-by-step sikhata hoon, maidan mein ghusne se pehle tumhe tamiz seekhni padegi.
Scalping samjho – Pehle din ka trainer drill
Scalping kya hoti hai?
Scalping matlab hai short-term trading, small profit aur jaldi nikal jao. Tum koi lambi investment nahi kar rahe, bas ek tez shot maar ke crease chhodni hai.
• Timeframe: Sirf 15-minute chart use karenge. (Chhoti timeframe = tez decision-making.)
• Goal: Chhoti price moves pakadna, bas 1-2% profit ka target rakho. Greedy hogaye toh market tumhara class teacher banake khara karegi!
Ab agla sawaal: Coin kaun sa uthane ka?
Agar tum galat coin pick karoge, toh tumhari trading ka hal wohi hoga jo Sarfaraz Ahmed ke “saay pe bowl” ka hota hai – koi result nahi, sirf pitai. Isliye hum aise coin chahte hain jo:
1. Volume high ho:

Volume ka matlab hai kitni buying aur selling ho rahi hai. Jitna zyada volume hoga, utni jaldi price move karega. Low volume = bazaar sunaan.
2. Price change short timeframe pe:
Jo coin already chal raha hai, wahi scalping ke liye best hota hai. Hum aise coins dhoondenge jo 15-minute timeframe pe 1% ya zyada move kar rahe ho.
Step 1: TradingView Setup (Mobile Friendly)
1. TradingView ka app download karo:
Play Store/App Store se lelo. Free account banao.
(Tum paid account lene wale log nahi lagte, chinta mat karo, free version kaafi hai.)
2. Screener dhoondo:
• App kholke neeche menu pe “Screeners” ka button dhoondo.
• Select “Crypto Screener”.
• Ab yahan filters lagao:
• Volume ≥ $50M.
• % Price Change (15 min timeframe) ≥ 1%.
• Remove low market cap coins, sirf bade coins rakho (BTC, ETH, SOL, etc.).
Logic: Hum un coins ko filter karte hain jo already market ke shor mein hain. Zyada volume ka matlab buyers aur sellers dono ghuse hue hain, aur price tez move karega.
Step 2: Chart kholna aur Indicators lagana
1. Screener ka top coin select karo jo tumhari filters pe aaya.
Example: Screener pe ETH/USDT dikha raha hai 15 min timeframe pe 1.5% up hai.
2. Chart kholke timeframe 15-minute ka set karo:
• Chart ke upar timeframe ka dropdown dhoondo aur 15M select karo.
• Kyun? Hum chhoti timeframe ka short-term trend dekh rahe hain. Lambi candles scalper ke kaam ki nahi.
3. Ab indicators lagao:
• EMA (Exponential Moving Average):
• Ek EMA 5 lagao (short-term moves ke liye).
• Ek EMA 20 lagao (trend confirmation ke liye).

• Jab EMA 5 cross kare EMA 20 upar, buy karo. Neeche cross kare, short karo.
• RSI (Relative Strength Index):
• Jab RSI 70 ke upar ho, coin overbought hai (sell ya short ka signal).
• Jab RSI 30 ke neeche ho, coin oversold hai (buy ka signal).
• VWAP (Volume Weighted Average Price):
• Price agar VWAP ke upar hai, trend bullish hai (buy dips). Neeche hai, bearish (short rallies).
Logic: Yeh indicators tumhe batate hain ke trend aur momentum kahan hai. Tumhara kaam bas trend ke saath chalna hai, against nahi.
Step 3: Trade kaise karna hai (Baby Steps)
1. Exchange ka app download karo:
Binance ya Bybit par account banao. Tum free me bhi start kar sakte ho.
2. Leverage set karo:
• New ho? 5x-10x leverage max. Zyada leverage lene ka matlab tumhara paisa jaldi ur jayega.
• Example: Tumhare paas $100 hain aur leverage 10x hai, iska matlab tum $1000 ka trade kar rahe ho.
• Stop loss lagana compulsory hai warna market tumhe Mirpur matador ki tarah utha ke le jayegi.
3. Trade ka size:
• Sirf 2-3% apne total capital ka risk lo.
• Example: Agar tumhare paas $100 hai toh ek trade mein $2-$3 ka risk lo.
4. Entry signal dhundho:
• EMA 5 ne EMA 20 ko cross kiya upar? Buy. Neeche cross kiya? Short.
• RSI oversold hai (30 ke neeche)? Buy. Overbought hai (70 ke upar)? Short.
• VWAP ke upar ho toh trend bullish hai, dips pe buy karo. Neeche ho toh trend bearish hai, rallies short karo.
Step 4: Quick Target Set Karo
Scalping mein greed nahi chalti, chhoti profit lo aur bhaag jao. Tumhare target hamesha:
• Stop Loss: Entry point se 0.5%-1% neeche.

• Take Profit: Entry point se 1%-1.5% upar.
Example: Tumne ETH $1500 pe buy kiya with 10x leverage.
• Take Profit: $1515. (1% upar)
• Stop Loss: $1490. (1% neeche)
Logic: Tumhara kaam price ke short moves pakadna hai. Overstay karoge toh market tumhe ‘Kitnay aadmi the’ ke dialogue se dhaka de degi.
Step 5: Final Discipline Rules
1. Screener aur indicators ke signal ke bina kuch mat karo:
Emotional trades lene ka matlab hai tumhara account zero hone wala hai.
2. Ek din mein max 2-3 trades lo:
Scalping mein overtrading ka hal wohi hota hai jo Afridi ke doosre over ka hota hai – sirf six aur out.
3. News aur hype check karo:
• Twitter pe coin ka naam search karo. Agar koi event ya pump ho raha hai toh usko scalping ke liye use karo.
• CoinMarketCal jao aur dekho koi big announcement toh nahi.
Example Trade (Follow Along)
1. Screener ne BTC/USDT suggest kiya (Volume $200M, 15m change +1.5%).
2. Chart khola, dekha:
• EMA 5 ne EMA 20 upar cross kiya.
• RSI 35 pe hai (oversold zone).
• VWAP ke upar price stable hai.
3. Binance pe gaye, 10x leverage ka trade open kiya.
4. Entry: $25,000.
• Stop Loss: $24,875 (-0.5%).
• Take Profit: $25,375 (+1.5%).
Result: 10 minutes mein profit leke nikal gaye.
Yaad rakho, tumhara kaam chhoti profits consistent rakhna hai. Tum “big game hunter” nahi ho, scalper ho. Practice karo aur phir batao kitne round kiya!

LECTURE 05

Demo ya Paper Trading, kisi exchange per nahie ya tradingview per nahie. Paper per khud write karna hai. phelay course complete karna hai www.waqarzaka.net.

Agar aap crypto trading mein naye hain, to sabse pehle **Paper Trading** ya **Demo Trading** ki practice karein. Neeche ek checklist hai jo har trade ke liye use karni hai. Isse har step ko samajhna asaan hoga aur aapka analysis structured hoga.

Checklist Har Trade Ke Liye (Fill In The Blanks):

TRADE LOGIC AUR INDICATORS:

Apni reasoning aur analysis likhein:

- **RSI (Relative Strength Index):**
  - RSI indicator lagane ke liye:

1. Kisi bhi charting platform jaise **TradingView** ya exchange chart (e.g., Blofin, Bitget, MEXC) kholen.
2. Chart ke upar "Indicators" button par click karein.
3. Search bar mein "RSI" likhein aur usse add karein.
4. RSI value likhein: ___

- RSI value agar **70 se zyada** ho to price overbought hai.
- Agar **30 se kam** ho to price oversold hai.

- **MACD Moving Average:**
  - MACD lagane ke liye:

1. Chart pe "Indicators" button par click karein.
2. Search bar mein "MACD" likhein aur usse add karein.
3. MACD lines ki position aur crossover analyze karein.

- MACD Analysis: ___

- **Support/Resistance Levels:**
  - **Support Level:** Price kis zone mein niche support le sakta hai? Likhein: ___

- **Resistance Level:** Price kis zone mein resistance ka saamna kar raha hai? Likhein: ___
- Support aur resistance samajhne ke liye price ka historical data dekhain aur un levels ko mark karein jahan price ne bar-bar react kiya ho.

- **Time Frame:**
- Kis time frame ka analysis kar rahe hain? (e.g., 1-hour, 4-hour, daily). Likhein: ___

TOTAL INVESTMENT:
Aapka total capital jo aap trading ke liye use karna chahte hain: ___

TRADE INVESTMENT:
Is trade mein kitna invest karenge? (Total ka 5-10%). Likhein: ___

LEVERAGE:
Kitni leverage use karni hai? (e.g., 5x, 10x). Likhein: ___

ENTRY PRICE:
Kis price par trade enter karna chahte hain? Likhein: ___

LIQUIDATION PRICE:
Liquidation price kaise calculate karein:

- Agar manually calculate karna chahte hain:
  Formula: Liquidation Price = Entry Price - (Entry Price / Leverage)
- Agar calculator use karna chahte hain:

1. **Blofin, Bitget, ya MEXC** par jaake "Leverage Calculator" ya "Liquidation Calculator" ka section kholen.
2. Entry price, leverage, aur quantity dal kar result dekhain.

- Liquidation Price: ___

STOP LOSS:
Stop Loss ka calculation aur placement likhein:

- **Formula:** Entry Price ka ___% neeche Stop Loss lagayen.
- Stop Loss: ___

PROFIT/LOSS CALCULATION:

- **Formula:** Profit ya Loss = (Exit Price - Entry Price) × Quantity
- Profit ya Loss likhein: ___

Eik paper per Eik Trade ka write up hona chahiye.

LECTURE 06

Future trading mei quick in and out k Liya coin Ki selection ki practice k steps | new comers kuch Nahie ata ? Yeh follow kar k practice karni hai aur **www.waqarzaka.net** course mei video

Scalping me long aur short kar ke paisa kaise banayein? Shuru se end tak step-by-step samajhte hain!

Step-by-Step Guide for Long and Short Trading Using Crypto Screener

(There can be lots of approaches and method but I'm using this one)

TradingView Setup: Start from Zero

1. TradingView Download Aur Open Karna

• Mobile Users:

• Apne phone ka Play Store ya App Store open karo.

• Search bar me "TradingView" likho aur app download karo.

• Install hone ke baad, app open karo aur "Sign Up" par click karke account banao. (Free account shuru ke liye best hai).

• Laptop/PC Users:

• Apna browser open karo (Chrome ya Safari).

• Website khol lo: **www.tradingview.com**

• Upar right corner me "Sign Up" ka button milega, uspe click karo aur free account banao.

2. Login Aur Chart Open Karna

• Account banane ke baad Login karo.

• Home page pe search bar milega, wahan BTCUSDT likho aur Enter dabao.
• Chart khul jayega. Ab tum ready ho trading ke liye!
Crypto Screener Kaise Use Karein?
Crypto screener ek feature hai jo tumhe perfect coins dhoondhne me help karega long aur short trades ke liye. Iska use karna asaan hai, bas steps follow karo.
Step 1: Crypto Screener Open Karna
1. Laptop Users:
• Chart ke neeche, left side pe ek tab hoga jisme “Crypto Screener” likha hoga.
• Uspe click karo, aur ek table open ho jayega.
2. Mobile Users:
• App ke neeche jo menu hai, wahan “More” (3 dots) pe click karo.
• Phir “Screener” select karo.
• Wahan Crypto Screener choose kar lo.
Step 2: Filters Lagana
Filters tumhe specific criteria ke coins shortlist karne me madad karte hain. Spot aur futures trading ke liye ye filters lagao:
1. Filter 1: RSI (Relative Strength Index)
• Screener ke upar “Filters” button pe click karo.
• Search bar me RSI likho aur RSI 14 ko select karo.
• Wahan range set karo:
• RSI < 30 (Oversold coins dhoondhne ke liye, Long ke liye perfect).
• RSI > 70 (Overbought coins dhoondhne ke liye, Short ke liye perfect).
2. Filter 2: Volume
• Filters me “Volume” search karo.
• Range set karo:
• Volume > 1,000,000 (High liquidity coins ke liye).
3. Filter 3: % Change (Price Movement)
• Filters me “% Change” option search karo.
• Set karo:

• % Change (15 Min): > 1% ya < -1% (Coins jo abhi active hain aur move kar rahe hain).
4. Filter 4: Market Cap
• Market cap filter lagao:
• Market Cap: $100M - $1B (Mid-cap coins safer hote hain scalping ke liye).
Step 3: Screener Result Analyze Karna
• Jo table khulta hai, usme tumhe coins ka list milega.
• Columns ko “RSI” ya ”% Change” ke basis par sort karo.
• High potential coins shortlist kar lo aur unka chart open karo (coin ke naam pe double-click kar ke chart khulega).
Indicators Ka Use (Long/Short Ke Liye)
Ab chart pe indicators lagao jo tumhari entry aur exit ko confirm karein.
Indicator 1: RSI (Relative Strength Index)
• Oversold (<30): Jab RSI 30 ke neeche ho aur upar ki taraf bounce kare, tab Long entry lo.
• Overbought (>70): Jab RSI 70 ke upar ho aur neeche gir raha ho, tab Short entry lo.
Kaise Lagayein RSI Indicator?
1. Chart ke upar “Indicators” button pe click karo.
2. Search bar me “RSI” likho aur Relative Strength Index select karo.
3. Chart ke neeche RSI ka box khul jayega.
Indicator 2: MACD (Moving Average Convergence Divergence)
• Jab MACD line signal line ke upar cross kare, to Long ka signal hai.
• Jab MACD line neeche cross kare, to Short ka signal hai.
Kaise Lagayein MACD Indicator?
1. Indicators button pe click karo.
2. Search bar me “MACD” likho aur select karo.
Indicator 3: EMA (Exponential Moving Average)
• Fast EMA (10) aur Slow EMA (50) ka crossover dekho.
• Jab Fast EMA upar ho: Long entry.

• Jab Fast EMA neeche ho: Short entry.
Kaise Lagayein EMA?
1. Chart pe Indicators open karo.
2. Search me “Moving Average Exponential” likho aur do baar select karo.
3. Ek EMA ka length 10 set karo aur doosre ka length 50.
Long/Short Scalping Strategy
Long Entry Steps (Buy):
1. RSI oversold (<30) ho aur upar bounce kar raha ho.
2. MACD bullish crossover kare.
3. EMA (10) > EMA (50) ho.
4. Chart pe green candles dikh rahi ho (price uptrend me ho).
Short Entry Steps (Sell):
1. RSI overbought (>70) ho aur neeche gir raha ho.
2. MACD bearish crossover kare.
3. EMA (10) < EMA (50) ho.
4. Chart pe red candles dikh rahi ho (price downtrend me ho).
Leverage, Liquidation, Aur Funding Rate Explained
1. Leverage Kya Hai?
• Exchange tumhare available funds ka multiple amount provide karta hai (e.g., 10x, 20x, 50x).
• Agar tumhara trade galat jaye, to tumhara initial fund liquidate hoga, lekin exchange tumse paisa waapas nahi maangta (credit card ka loan nahi hai).
2. Liquidation Kya Hai?
• Jab tumhara loss tumhare funds ke barabar ho jaye, to exchange tumhara position close kar deta hai.
3. Funding Rate Kya Hai (Sood Nahi Hai)?
• Funding rate ek adjustable mechanism hai jo long aur short traders ke beech paisa balance karta hai.
• Ye interest nahi hai, kyunki ye fixed nahi hota aur market dynamics ke mutabiq change hota hai.
• Logical Explanation (Quran Ke Mutabiq Haram Nahi):
• Fixed interest nahi hota.

• Profit aur loss sirf market ki movements ke basis pe hota hai.

Tips for Beginners:

1. Screener ke sath RSI aur MACD zaroor use karo.
2. Sirf liquid coins trade karo (BTC, ETH, BNB).
3. Leverage low rakho (5x ya 10x max).
4. Stop loss aur target profit set karna mat bhoolo.

Just to explain for our Halal haram lovers |

Quran Ayat: Allah se Jang ka Elan (Surah Al-Baqarah 2:279)

“Aur agar tum ye (Sood) chhod do, to tumhare liye tumhara asal maal hai. Na tum kisi par zulm karo aur na tum par zulm kiya jaye. Lekin agar tum (Sood lena) nahi chhodte, to Allah aur uske Rasool ke khilaf jang ke liye tayar ho jao.”

Details Explained in Frank Roman Urdu

1. Credit Card Aur Leverage Ka Farq

• Credit Card:

Jab tum credit card use karte ho, bank tumhe ek fixed loan deta hai, jiska interest (sood) tumhe har mahine dena hota hai. Agar tum repay nahi karte, to wo compound interest (mote munafay ke sath) lagta hai, jo haram hai.

• Example: Tumne 10,000 PKR ka loan liya, agar nahi diya to wo tumse extra paisa vasool karenge. Ye zulm aur haram hai.

• Leverage (Trading Exchanges par):

Exchange tumhe leverage deta hai (e.g., 10x, 20x, 50x), jo tumhare apne funds ka multiple hota hai. Agar tumhara trade galat jaye, to sirf tumhare initial funds liquidate hote hain, lekin exchange tumse kuch extra vasool nahi karta.

• Example: Agar tumhare paas $100 hain aur 10x leverage use kiya, to tum $1,000 ka trade karte ho. Agar price 10% neeche jaye, to tumhara $100 khatam ho jayega, lekin exchange tumse aur paisa nahi lega.

• Logical Justification: Ye fixed repayment system nahi hai, aur isme koi sood nahi hai. Exchange tumhara loss sirf tumhare funds se recover karta hai.

2. Exchange Paisa Kaise Banata Hai?

1. Trading Fees:

Har trade ke upar exchange ek small fee charge karta hai (e.g., Binance 0.1% fees leta hai).

• Long ya short trade karo, exchange ko hamesha apni fees ka profit hota hai.

2. Funding Rate:

• Jab zyada log long karte hain, to long traders short traders ko funding rate pay karte hain (aur vice versa).

• Ye interest nahi hai, kyunki ye fixed nahi hota aur market dynamics ke mutabiq change hota hai.

3. Leverage Traders Se Profit:

• Zyada leverage wale trades generally loss me jaate hain (kyunki beginners galti karte hain).

• Exchange is hope ke sath leverage deta hai ke majority traders lose karenge, aur wo unka liquidated paisa rakh lega.

3. Market Makers Kya Hain Aur Paisa Kaise Banate Hain?

• Market Makers bade financial institutions hote hain jo exchange ko liquidity provide karte hain.

• Liquidity Kya Hai?

• Jab tum buy ya sell karte ho, wo ensure karte hain ke koi hamesha opposite side pe ho (i.e., tumhari trade turant execute ho).

• Market Makers Ka Profit:

1. Spreads: Wo buy aur sell price ke beech ka difference lete hain (e.g., buy at $100, sell at $101).

2. Volume-Based Fees: Zyada trades hone par unhe exchanges se commission milta hai.

Logical Justification (Haram Kyu Nahi?):

Market makers ka kaam sirf liquidity provide karna hai. Wo directly kisi se interest nahi lete, na fixed profit ka demand karte hain.

4. Gharar Aur Futures Trading
• Gharar (Uncertainty):
Islam me har wo deal haram hai jisme excessive uncertainty ya fraud ho.
• Example: Tum ek aisi cheez ka contract sign karo jo exist nahi karti ya jisme fair information na ho.
• Futures Trading Halal Hai Kyu?
• Futures contracts me assets clearly defined hote hain (e.g., BTC, ETH).
• Dono parties ko apne risk ka pata hota hai, aur koi fraud nahi hota.
• Profit aur loss market ke movements par depend karta hai, na ke kisi fixed interest par.
• Ye risk-based hai, jo Islam me allowed hai, jab tak speculation excessive na ho.
Conclusion
1. Leverage aur Credit Card Alag Hain:
• Leverage me koi sood ya fixed repayment nahi hota, jo Islamic principles ke mutabiq hai.
2. Funding Rate Interest Nahi Hai:
• Ye ek adjustment mechanism hai jo market ko balance karta hai, fixed nahi hai.
3. Market Makers Aur Exchanges Haram Nahi Hain:
• Ye liquidity aur trading facilitation ke liye kaam karte hain, aur interest ya fraud ka hissa nahi bante.
4. Futures Gharar Nahi Hai:
• Ye ek transparent aur defined contract hota hai, jo fair information aur risk-based system pe depend karta hai.
Islam me trading aur risk-based systems allowed hain, jab tak us ko copy paste trade na kiya jeay infact education le kar specially risk samja kar kiya jeay tu.

LECTURE 07

5 MINUTES PER TRADE: SPOT YA FUTURE TRADING SIRF RSI KE SATH

(course phelay complete karna hai www.waqarzaka.net sey warna yeh samja nahie aye ga)

Agar tumhe trading ka bilkul bhi idea nahi aur pro trader ki tarah profit banana hai, to yeh guide sirf tumhare liye hai. Sirf **RSI (Relative Strength Index)** ka use karke **Bitcoin** per spot ya futures trading karo aur practice se pro bano.

Yeh guide simple hai, lekin agar isko samajh liya aur Demo trade daily 2 gantay one month k liya karliya tu eik month k baad 100 dollars 200x leverage bi kaafi hai future trade start karney k liya , but trade mei 1 dollar aur leverage 200x . SPOT k liya minimum 500 dollars hon phir.

RSI HOTA KYA HAI?

RSI ek indicator hai jo batata hai:

- Market **speed** (price kitni fast upar ya neeche ja raha hai).
- Market ka **momentum** (trend ki taqat ya weakness kya hai).

Yeh scale **0-100** ke darmiyan kaam karta hai:

- **Above 70**: Overbought zone - price bohot zyada barh chuka hai, neeche aasakta hai.
- **Below 30**: Oversold zone - price bohot zyada gir chuka hai, ab upar ja sakta hai.

Yeh indicator kaam ka hai kyunke yeh trend reversal ke signals deta hai, lekin galtiyan karni allowed nahi.

Reference: Yeh system **J. Welles Wilder Jr.** ne invent kiya aur unki kitab **“New Concepts in Technical Trading Systems”** se yeh knowledge li gayi hai. Trading ka gold standard isi kitab ko mana jata hai.

BITCOIN PER RSI USE KARKE SIRF 5-MINUTE TRADES

1. TRADINGVIEW SETTINGS:

1. **Chart Open Karo**: Bitcoin ka chart select karo aur time frame **5-minute** set karo.
2. **Indicator Add Karo**: RSI indicator search karke add kar lo (default settings: 14-period).
3. **Lines Samjho**:
   - RSI line **70 ke upar**: Price overbought.
   - RSI line **30 ke neeche**: Price oversold.

2. SPOT TRADING STRATEGY (SCALPING):

- **LONG Trade**: Jab RSI **30 ke neeche** ho aur neeche se upar ja raha ho, tab buy karo.
- **SHORT Trade**: Jab RSI **70 ke upar** ho aur upar se neeche ja raha ho, tab sell karo.

Tips:

- Candle close ka wait karo; RSI jab cross kare, tab hi trade lena.
- Zyada greedy mat bano, 0.5%-1% profit leke nikal jao.

3. FUTURES TRADING STRATEGY:

- **Leverage**: 5x ya max 10x se shuru karo. Futures risky hai, isliye leverage low rakho.
- **Quick Entry/Exit**:
  - **LONG**: RSI 30 ke neeche jaaye aur upar return kare, turant long kar lo.
  - **SHORT**: RSI 70 ke upar ho aur neeche cross kare, turant short kar lo.
- Ek hi trade mein greedy mat ho; small profits collect karo.

TRICKS & PRO TIPS:

1. **No Stop Loss Strategy**: RSI scalping mein stop loss na lagao, lekin ek range define karo jahan loss accept kar lo. Example: Agar trade galat ja rahi hai, 2% loss accept karo.

2. **Quick Scalping**: Bitcoin ke liye RSI bohot efficient hai. Sirf chhoti moves ke liye trade karo.
3. **Confirmation Doji Candle**: Jab RSI oversold/overbought zone se nikal raha ho, doji candle ka wait karo (reversal signal).
4. **FOMO Avoid Karo**: Kabhi bhi market ke hype ya panic mein mat trade karo.

GALAT SIGNALS KAB MILTE HAIN?

1. **Choppy Markets**: Jab market sideway chal raha ho, RSI signals fail kar sakte hain.
2. **Big News Events**: Jab koi badi news aaye (Fed interest rate, crypto regulations), RSI reliable nahi hota.
3. **Fake Breakouts**: Kabhi kabar RSI overbought/oversold hone ke baad bhi fake breakout karta hai.

PRACTICE KARO AUR PRO BANO

- Pehle demo account pe practice karo.
- Spot trading se shuru karo, phir futures try karo.
- RSI ka use karke scalping ka maza lo aur samjho ke kis point pe zyada profit hota hai.

1. TRADE EXIT KAB KARNI HAI?

(A) JAB PROFIT TARGET PURA HO JAYE:

- Tumhara pehle se set **Take-Profit** hit ho jaye, bas usi waqt exit kar lena chahiye.
- **Example:** Agar tumhara target BTC par 1-2% ka profit hai aur woh hit ho gaya, to greed mat karo, turant exit karo.

(B) JAB MARKET REVERSAL HO:

- Agar lag raha hai price trend change kar raha hai, to exit kar lo.
- Indicators jaise **RSI** aur **support/resistance zones** use karo for confirmation.
- Example: BTC upar ja raha tha, lekin suddenly neeche gir raha hai. Reversal ka signal hai, turant position close karo.

(C) TIME-BASED EXIT:

- Scalping mein zyada wait mat karo. Agar trade 3-5 minute ke andar profit nahi de raha, to close kar do.
- Scalping ka rule hai **quick in, quick out**.

(D) JAB STOP-LOSS HIT HO:

- Stop-loss laga kar rakhna zaroori hai. Agar price stop-loss par aa jaye, to loss accept karke trade close kar do. Zyada loss lene ka risk mat uthao.

2. RISK-TO-REWARD RATIO (R:R)

Risk-to-reward ratio ka matlab hai tum kitna risk le rahe ho aur kitna reward expect kar rahe ho.

BEST RATIOS FOR SCALPING:

- **1:2:** 0.5% risk leke 1% ka profit target.
- **1:3:** 0.5% risk leke 1.5% ka profit target.
- **1:4:** 0.5% risk leke 2% ka profit target.

EXAMPLE:

- **BTC Entry Price:** $36,000.
- **Stop-Loss:** $35,820 (0.5% risk).
- **Take-Profit (1:3):** $36,540 (1.5% reward).

Agar trade galat ho, to sirf 0.5% ka loss. Agar sahi ho, to 1.5% ka reward. Yeh consistent aur safe trading ka tareeqa hai.

3. RISK-TO-REWARD RATIO KYON ZAROORI HAI?

- Agar tum 10 trades karte ho aur 5 galat ho jati hain, lekin tumhara R:R 1:3 hai, tab bhi tum profit mein rahoge.
- **Example Calculation:**
  - 5 Losing Trades: -0.5% x 5 = **-2.5% Loss**.
  - 5 Winning Trades: +1.5% x 5 = **+7.5% Profit**.
  - **Net Profit:** +5%.

4. QUICK TIPS FOR EXIT & RISK MANAGEMENT:

- **Stop-Loss Zaroor Lagao:** Stop-loss ke bina trade mat karo. Agar price galat side chale jaye, to tumhara capital safe rahega.

- **Greedy Mat Bano:** Profit dikhte hi exit karo. Scalping mein zyada time hold karna risky hai.
- **Emotions Control Mein Rakho:** Fear ya greed ke chakkar mein trade hold mat karo. Jo plan kiya hai, us par stick karo.

Yeh rule follow karo aur trading safe rakho. Agar aur kuch samajhna ho to pucho!

Eik issue hota hai

Divergence Aur RSI Mid-Zone Ke Issues Ko Handle Karne Ka Tareeqa

PROBLEM SAMAJHNA:

- **Overbought Coin (RSI Above 70):**
  Jab RSI overbought zone mein hota hai, usually price reversal ki expectation hoti hai. Lekin pump karte huye coins divergence dikhate hain (price upar, RSI neeche).
  - **Divergence Ka Matlab:** Momentum slow ho raha hai, lekin price abhi bhi push kar raha hai.\n\n- **Mid-Zone RSI (40-60):**
    Jab price neeche aati hai aur RSI mid-zone mein hoti hai, yeh undefined zone ban jata hai. Mid-zone se RSI kabhi upar jata hai, kabhi neeche, jo direction unclear kar deta hai.

2. ISKA SOLUTION: PRACTICAL STEPS
(A) CONFIRM RSI DIVERGENCE KE BAAD PRICE ACTION:

- RSI divergence tab tak effective nahi hoti jab tak price support ya resistance tod kar reversal na dikhaye.
- **Rule:** Sirf RSI divergence pe trade mat lo. **Price action (support/resistance zones)** aur candlestick patterns ka bhi intezaar karo.

(B) RSI MID-ZONE KO AVOID KARO:

- Jab RSI mid-zone mein ho (40-60), tab koi trade mat lo. Yeh zone directionally weak hota hai. Wait karo ke RSI clearly **above 60 (bullish)** ya **below 40 (bearish)** jaye.

(C) CONFLUENCE STRATEGY USE KARO:

- Sirf RSI ke basis par trade karna risky hota hai. Confluence ka matlab hai multiple confirmations lena:

1. **RSI Divergence** (overbought ya oversold).
2. **Support/Resistance Levels** pe price ka reaction.
3. **Volume Confirmation:** Agar divergence ke saath volume bhi gir raha hai, to reversal ka chance zyada hota hai.

(D) HIGHER TIMEFRAME CHECK KARO:

- Sirf 1-minute ya 5-minute chart par depend na karo. **Higher timeframes** (e.g., 1-hour ya 4-hour) dekh kar trend confirm karo. Agar higher timeframe bullish hai, to mid-zone RSI se bounce expect kar sakte ho.

(E) STOP-LOSS AUR TARGETS DEFINE KARO:

- Divergence trades mein kabhi bhi stop-loss lagana bhoolo mat.
- **Stop-Loss:** Nearest support ya resistance ke neeche/upar rakho.
- **Take-Profit:** Divergence ki expected move ke hisaab se define karo (1:2 ya 1:3 R:R ratio).

3. PRACTICAL EXAMPLE:
SCENARIO:

- Aapke coin ka RSI 75 hai (overbought).
- Price abhi bhi upar ja raha hai, lekin RSI neeche aa raha hai (divergence).
- Price ek strong **resistance zone** ke paas hai.

STEPS:

1. Wait karo ke price **resistance todta hai ya reject hota hai**.
2. Agar price resistance tod de aur RSI upar jaye (70+), to divergence ignore kar ke bullish continuation trade lo.
3. Agar price resistance reject kare aur RSI neeche aaye, to bearish trade lo.

4. Mid-zone RSI (40-60) mein koi action mat lo. Wait karo ke RSI clearly 40 ke neeche ya 60 ke upar jaye.

4. IMPORTANT RULES:

- **Patience Rakho:** RSI divergence hamesha immediate move nahi deti. Kabhi kabhi price aur pump karta hai before reversal.
- **Confluence Pe Focus Karo:** RSI ke saath volume, candlesticks, aur price action confirm karo.
- **Avoid Mid-Zone Trades:** Jab RSI unclear ho, koi action mat lo.
- **Trend Follow Karo:** Agar coin trending hai (uptrend ya downtrend), to divergence kabhi-kabhi fail hoti hai. Trend ke against trade lena risky hota hai.

Agar phir bhi confusion ho, specific chart example dekar pucho, main usko breakdown kar ke bata sakta hoon.
