# Bearish Trading Setup

TO use the above trading setup properly, please read the explanation below multiple times…..

Binary sun7

To Trade with this setup connect the point “A and B” with the help of a trend line. And when the market comeback and touch the same level , (at the 3rd time) and if you found the candle “ D”( red bearish candle) - (that will be your conformation candle).You can place a put option here for the next 5 minutes (use 1 minutes candle with 5 min expiry)…

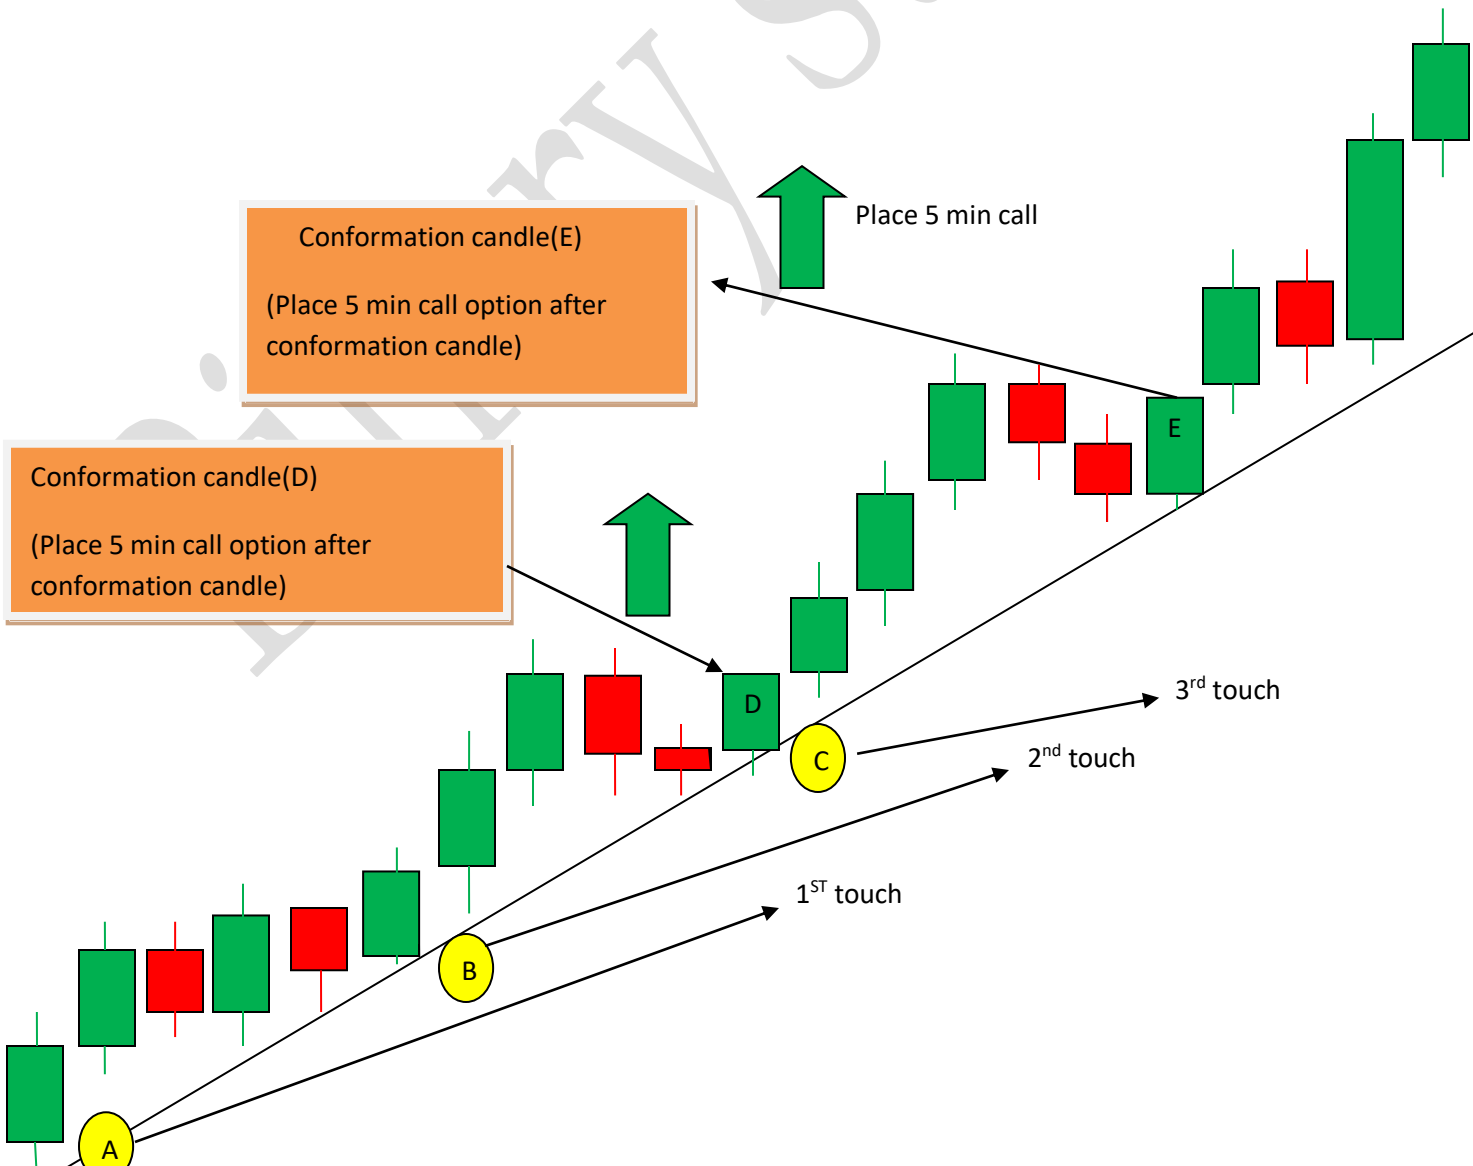

CONDITIONS:

1. Use this trading method in a trending market
2. Must avoid in the news affected market
3. Use this trading setup with the help of 1 minutes candle with 5 minutes expiry
4. Must check multiple times with the live chart examples and need proper practice
5. Dont trade if don’t find the conformation candle
6. dont trade if the market structure changed (here it’s better to avoid in major Support area)

# Wide Range Bar

Bullish Trading Set up 1

Wick Size Should be Smaller and the Body Size Should be Larger

Green (wide range bar) – Red + Red = Green

Bullish Wide Range Bar

Here the candle no 2nd and 3rd should be inside the body of the candle no 1

Binarysun

# EXPLANATION

**W**hat is a Wide Range Bar ? Bars occur when there is a bar the size of that one at least 2 times longer than the most recent bars in the chart(2-3 times ).(in the binary options a healthy candle can consider " if the size of the candle is 3 times higher when compared to the other candles in the chart then must avoid that and don't consider that as your wide range bar ."

For Trading In the Binary Options We Need to use the WIDE RANGE BAR in a Different way

In the binary options we need to use this trading setup with the help of a Wide range bar candle + the next 2 candles (simply means it can be perfectly trade with the help of that 3 candles combination like in the above and below images) , and also in some situations we must avoid this trading setup , which also mentioned clearly in this E Book .

This strategy is purely based on the Wide Range Bar candle

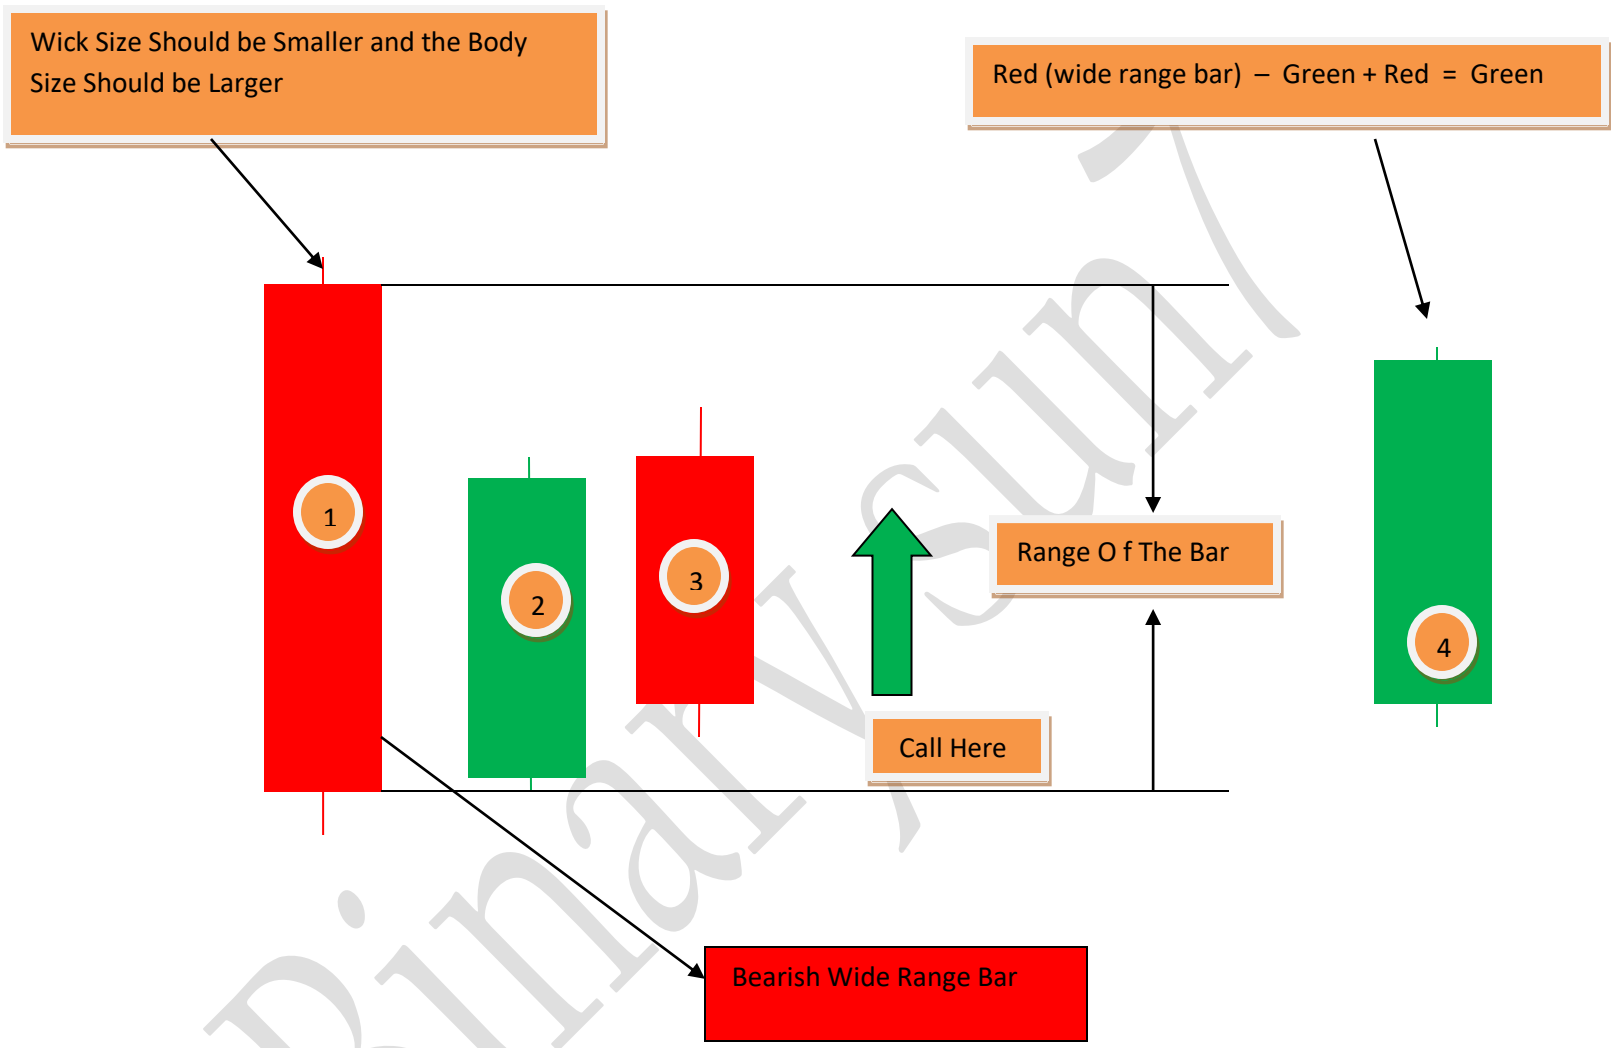

After the formation of a Wide Range Bar candle ,if the next 2 candles closed inside the body of the wide range bar candle , the we can use that setup effectively.

If we face loss with this setup once again place the same direction after your 1st loss (But keep a margin of safety entry in this time (may be weak type opposite color candle may chance to form in the chart) most of the time it will be winning .

Strictly Don't use this Wide Range Bar trading setup after an OutSide Bar.. it will be heavy risky, the market don't reverse most of the time

# Bullish and Bearish Twice Breakout Strategy

This is one of the common trading method and that can be effectively used in the binary option trading ,Because this same color breakout strategy is very common in the chart.

To take some confident trades (nothing 100% , so you must have to follow money management), through this trading method the market must have to full fill the following conditions and also you must have to follow the instructions too..

check the below pages properly …….

Clear Breakout of 1st green candle body and top wick from the support area by the 2nd candle

Use this Bullish trading setup only in the support area

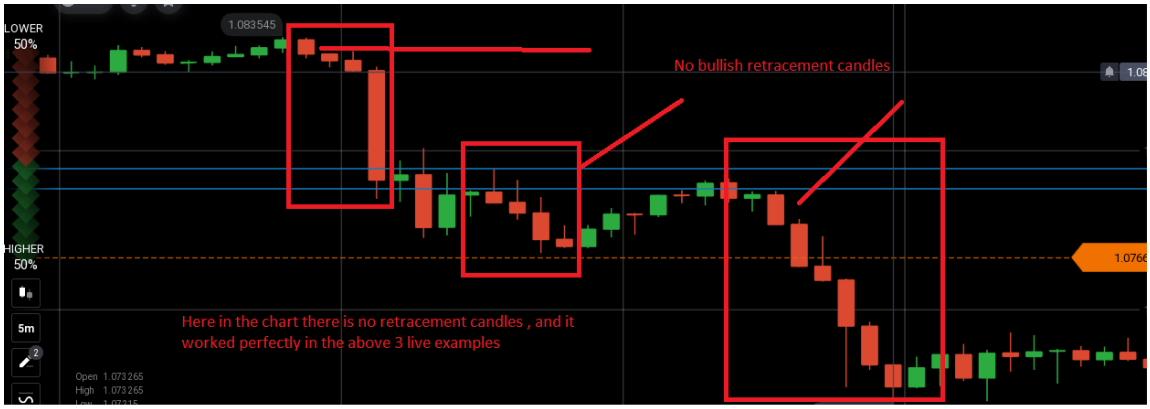

We must have minimum 2 green candles (better to use 2 healthy candles )from the support area

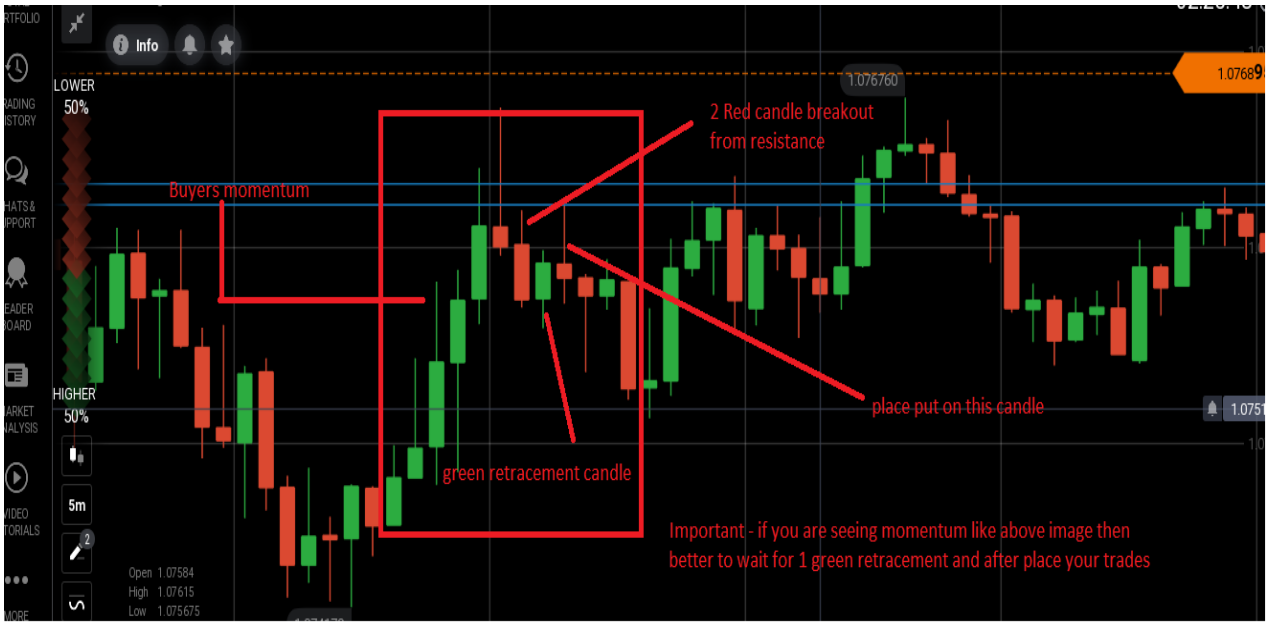

And the 2nd green candle must have to break the higher high of the 1st green candle like in the above picture .

Then it's a buying opportunity and 20% of the time 1 red retracement candle chance to come and after you can apply 1step martingale. And that will be a winning trade in most of the time.

Important- one retracement that mostly forming after a momentum ( example- if you are seeing 2 green candle breakout after a bearish strong momentum then 1 red candle retracement can expect )

Check the below live chart of one retracement candle

RISK WARNING – You must have to follow the below instructions properly

# Instructions

1.The same color candles must have to form in the snr level

2.Avoid if its form in the middle of the trend

3.The 2nd bullish candle must cross the high of the 1st bullish candle (from support area)

AND for bearish – The 2nd red candle need to cross the low of the 1st red candle (from resistance)

4.If you found this trading opportunity after a momentum (like above chart), then chance for a retracement candle.

so keep that always on mind and don't directly jump .

5.can use 1step martingale to get the maximum winning trades

6.must check the closing point of the 2nd conformation candle , if its closed at any trend line level or horizontal level then must avoid that

7.Round number level also must consider (if it's a working round no then you may chance to loose your trades)

8.Better to avoid in the consolidation area(because the levels are very narrow here)

9.If the market is highly news affected or if it feel very low volume market then also better to avoid , always try to choose healthy market .

# Check the Below Examples

# Engulfing Breakout Strategy

This one is very common in the market and can be traded for the binary options with more than 90% accuracy.

HOW TO USE – To use this trading setup , we must have minimum 2 same color candle

And after a opposite retracement candle need to form in the chart (only 1candle as a retracement), after that next candle should be an engulfing and that need to cover that retracement candle , after that you can place a continuation trade based on your engulfing candle(sometimes retracement candle will come , so you can use 1 step martingale in those situations.)

# Instructions

1.You need to avoid if the conformation candle closed at any of the SNR level.

2.And also must avoid in the news affected market

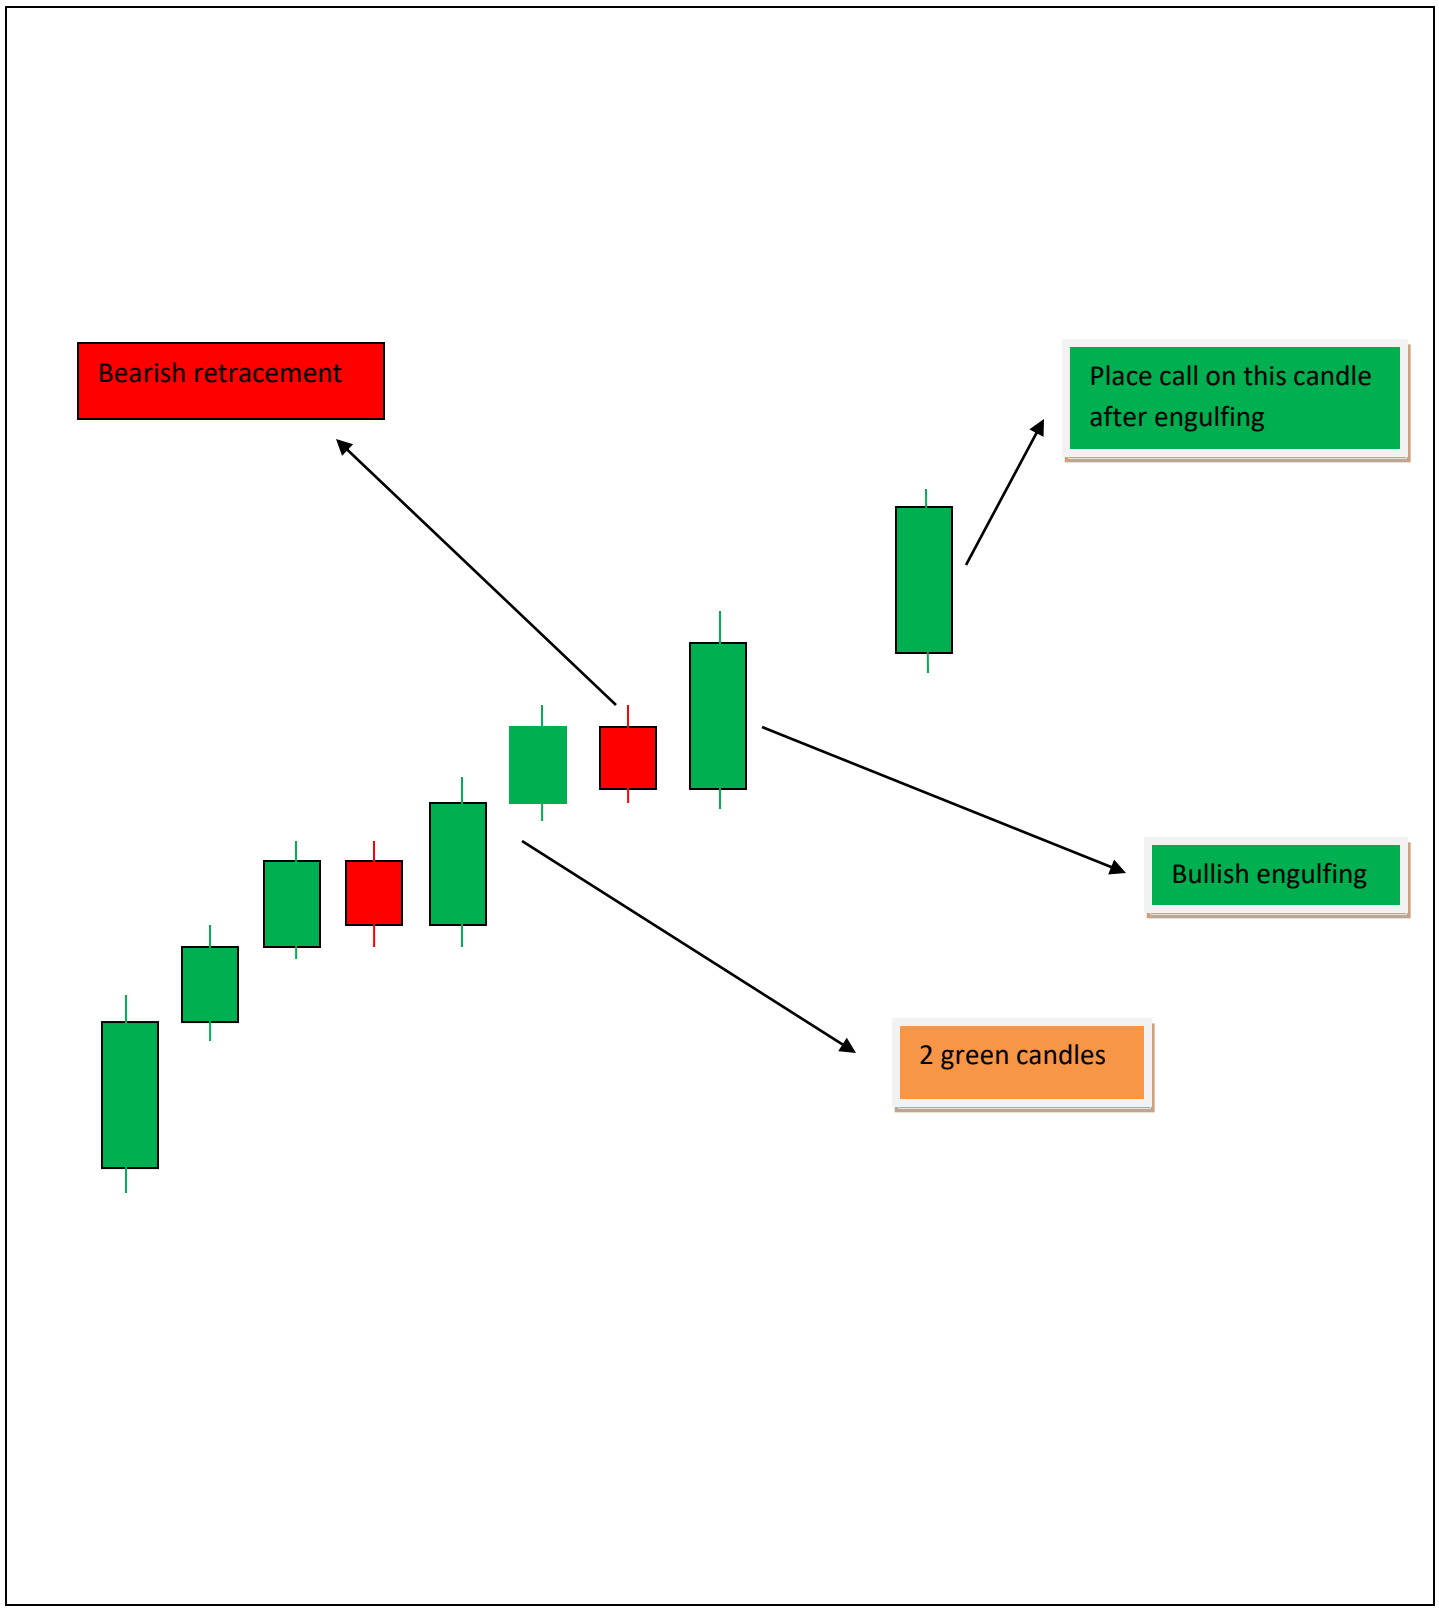

3.Must check the explanations of all of the examples , because in some situations it don't work

4.Everything clearly updated in the example chart , so must read that carefully

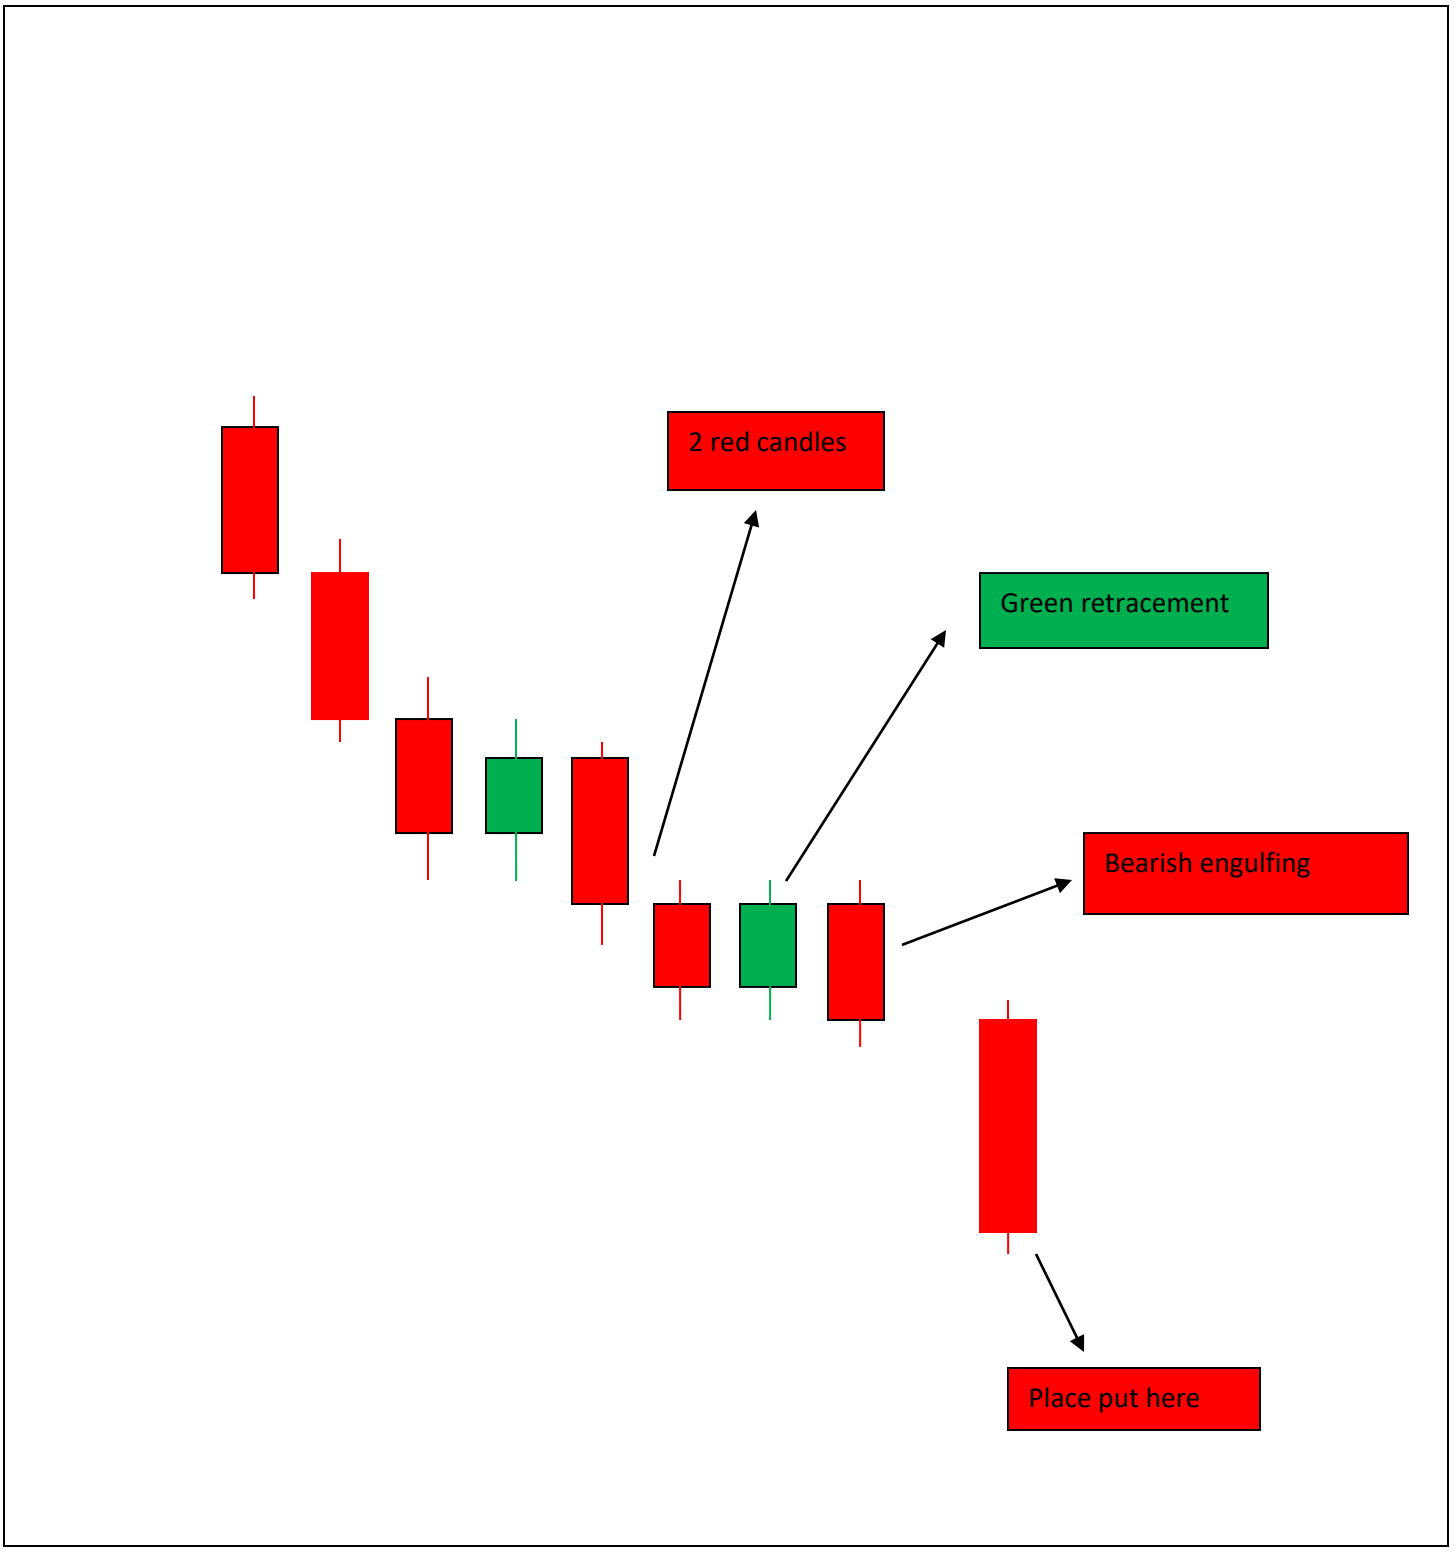

5.Can use 1 step martingale or better to trade after seeing retracement candle( for this trading setup 25- 30% of the time chance for making retracement candle )

Check the below images

# Full Fill Left Candle(FFLC)- put option

Minimum 4 consecutive candles required

**put**

1st green candle need to cross the tail (top wick ) of last red candle

It's an opportunity to sell , so place put after seeing above condition

Binary sun

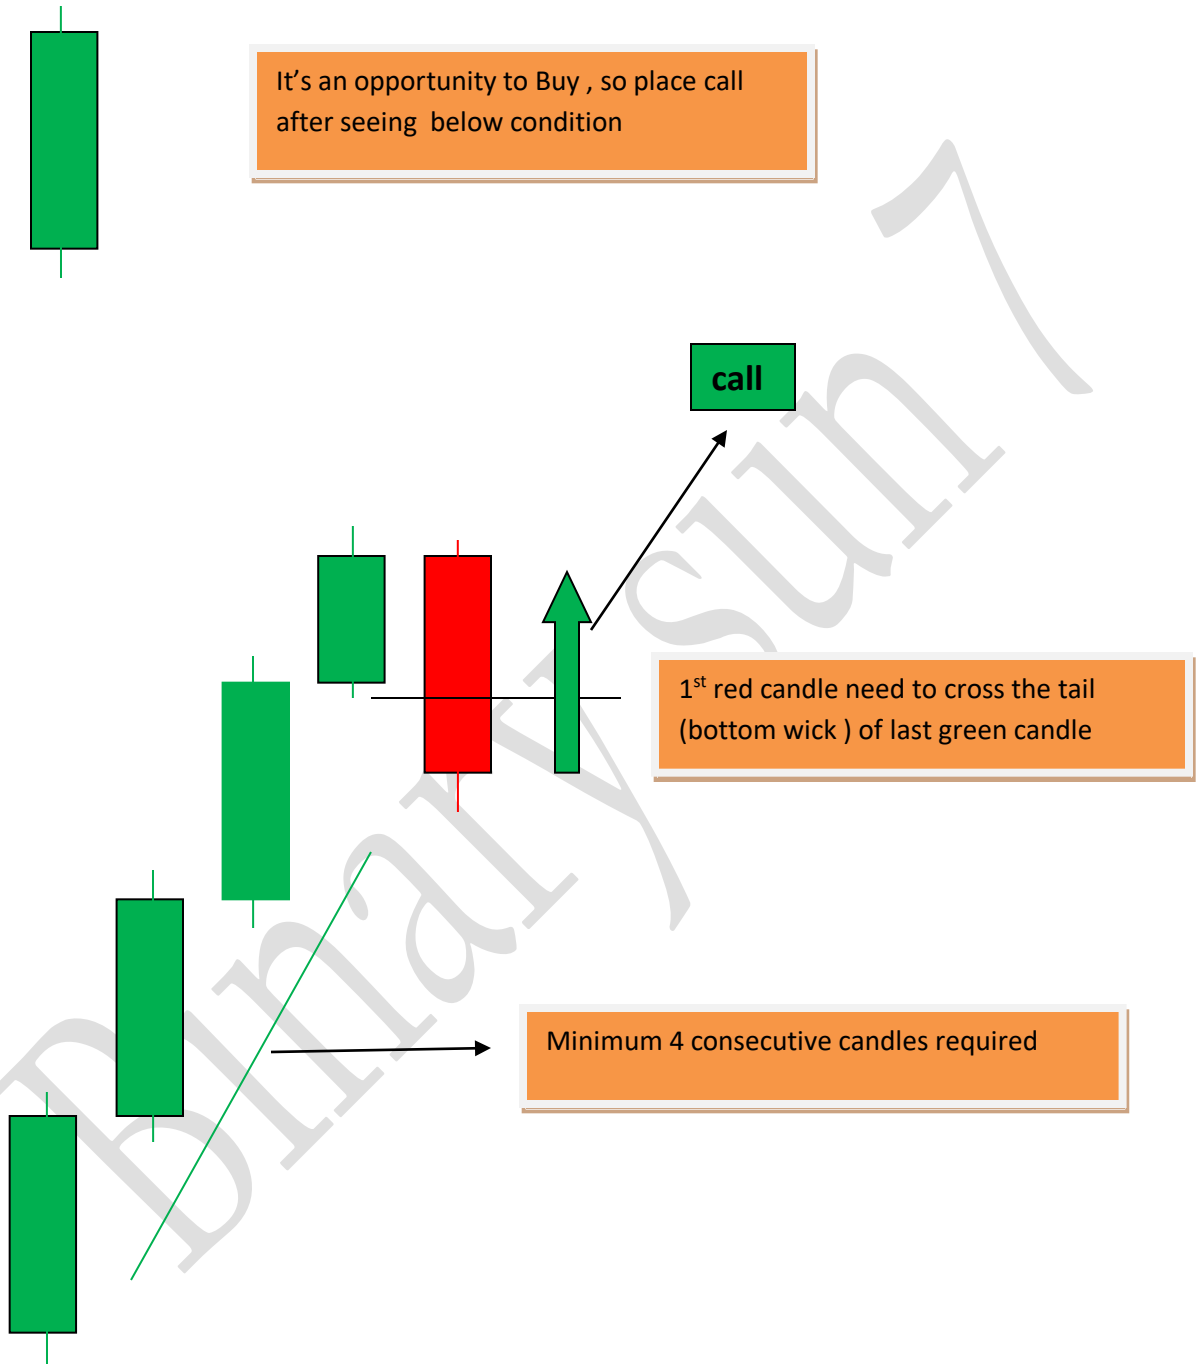

# Explanation

To use the above trading opportunity , we must have minimum 4 consecutive(continuous) red candles. After need a bullish candle like above image and that need to fully cross the (like an engulfing - need to completely cover) last red candle like in the picture. So it's the time to sell .

IMPORTANT- Sometimes (20% ) we can expect 1 error candle , so can try 1 step martingale . now a days market is always news affected so the errors are very common in the market .

We need to avoid highly trending markets – must read the instructions page properly for the better understanding , then everything will be 100% clear and you can improve your accuracy level .

# Full Fill Left Candle(FFLC)- call option

Binary sun 7

# Explanation

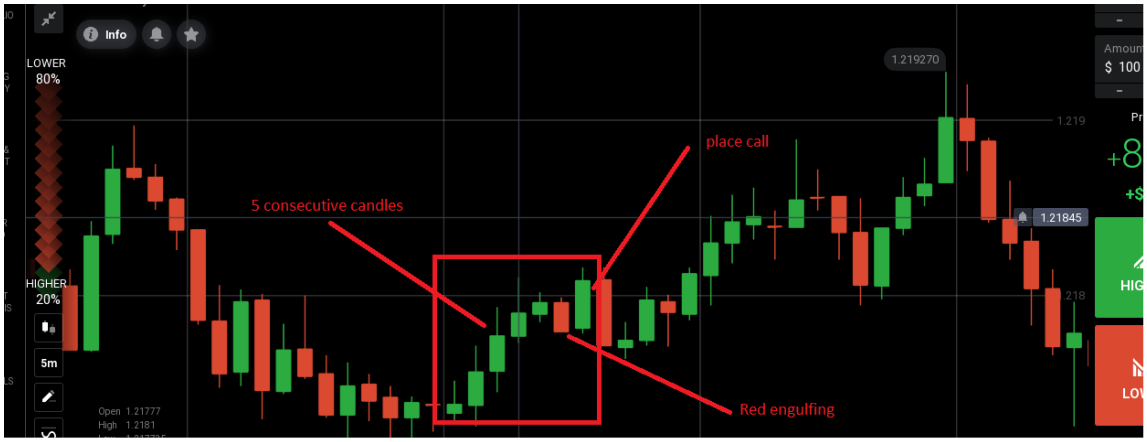

To use the above trading opportunity , we must have minimum 4 consecutive(continuous) green candles. After need a bearish candle like above image and that need to fully cross the (like an engulfing - need to completely cover) last green candle like in the picture. So it's the time to buy .

IMPORTANT- Sometimes (20% ) we can expect 1 error candle , so can try 1 step martingale . now a days market is always news affected so the errors are very common in the market .

We need to avoid highly trending markets – must read the instructions page properly for the better understanding , then everything will be 100% clear and you can improve your accuracy level .

# Wick Breakout strategy

The wick breakout strategy is one of the common and very high accurate trading Setup and that can be use in the binary options effectively .

For using this trading strategy you must read all of the information's carefully

For using this trading method we must have minimum 3 same color candles

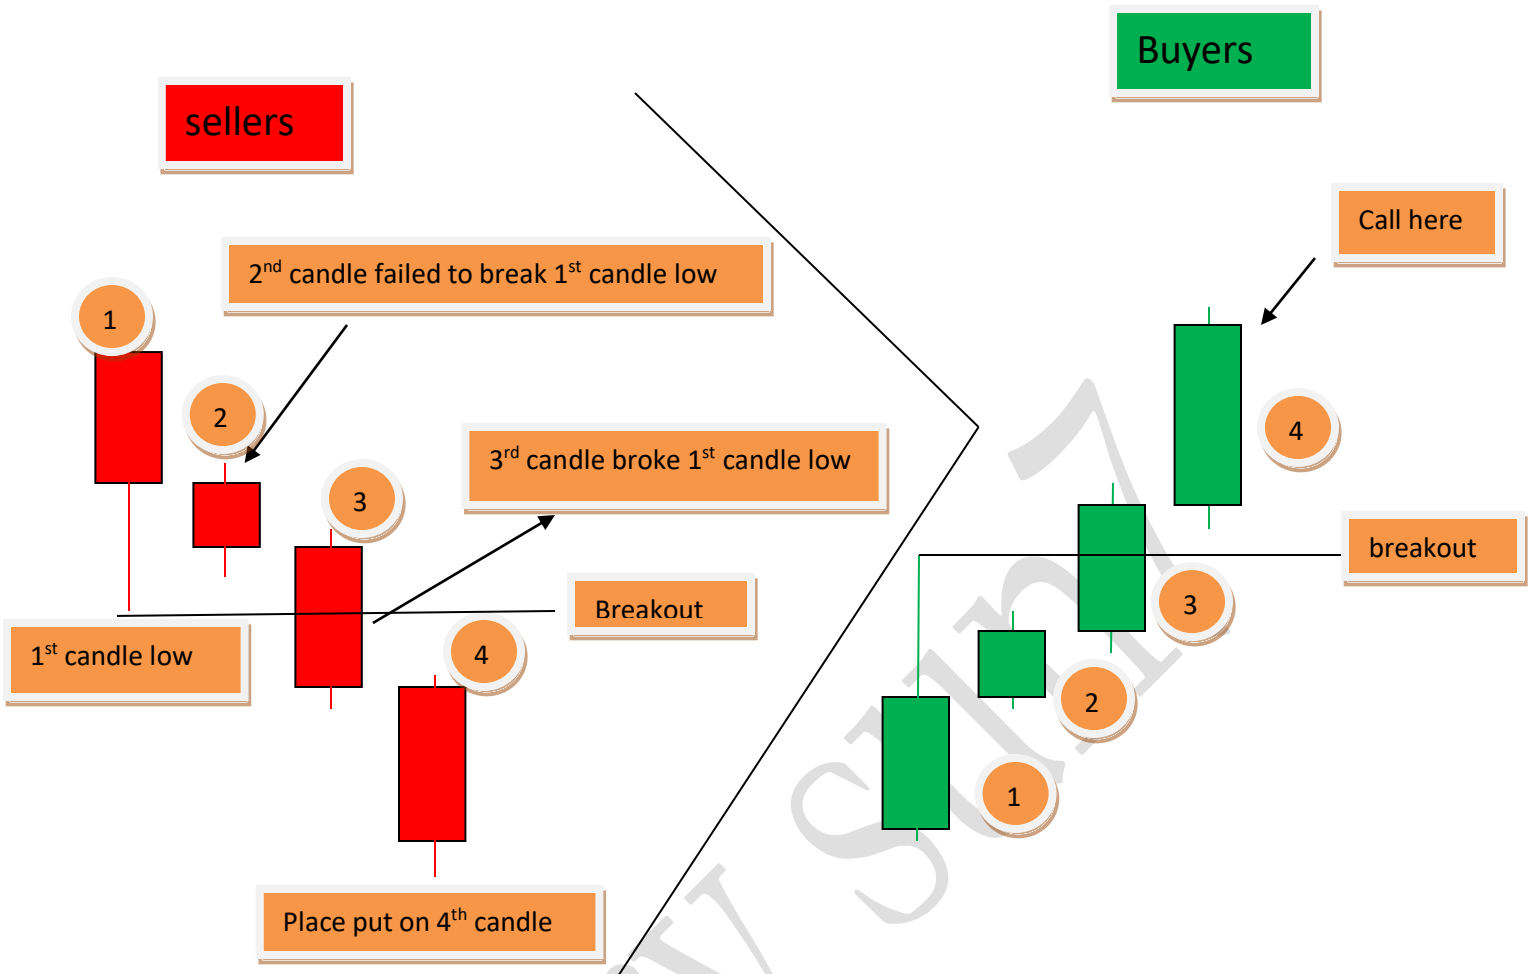

The 1st candle must have head (for buyers wick in upside and for sellers a wick in lower side ) and the second candle's body don't cross that wick (take a look below image). Simply means the second candle must close inside of that 1st candle wick. And after the

3rd candle need to close below of the 1st candle wick( for sellers) (like below image)

3rd candle need to close above of the 1st candle wick (for buyers)

Then it's a continuation sign… of the market

(IMPORTANT – IF THERE IS ANY SNR LEVEL AT THE CLOSSING POINT OF 3RD CANDLE THEN MUST AVOID THAT )

Errors are common for this setup, must read below instructions and examples properly to avoid such errors

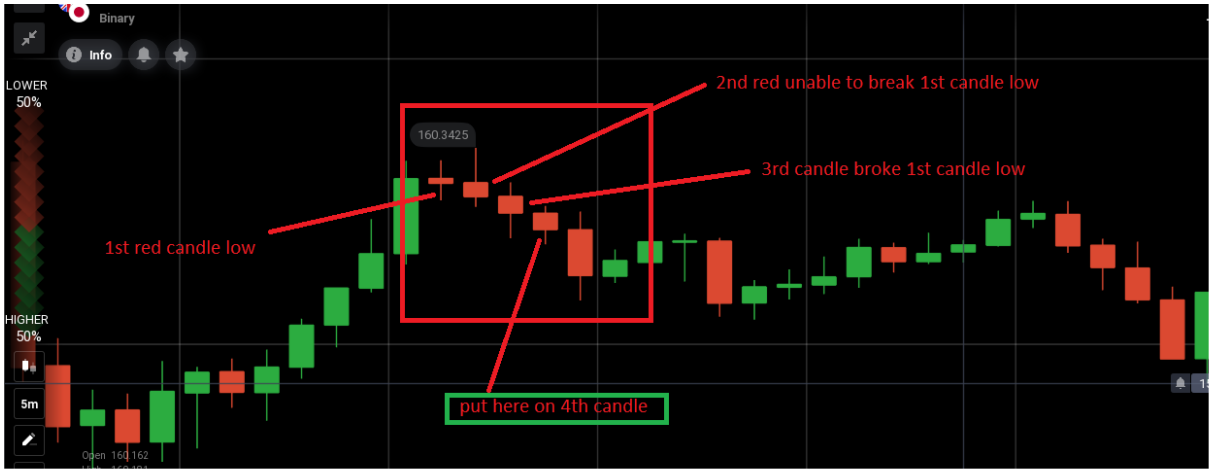

Binary Sun

# INSTRUCTIONS

1. 3rd candle must cross the wick of 1st candle properly . If the wick level of 1st candle and the closing point of the 3 rd candle is almost same then , don't place continuation trade , it's need to cover completely and close below of that (for sellers ) And close above of that ( for buyers)
2. If the 3rd candle closed at any SNR level , then most of the time 2 error candles can occur ( sometimes 3 errors can come ) . so in those situations wait for that 2 error candles and place your trade after that only (images added on the examples below) or avoid such trades if the 3rd candle closed at any of the SNR levels
3. Can use 1 step martingale (must check on closing point there is any levels or not)
4. Must read the explanations of the examples below multiple times

# Examples For Sell Trade

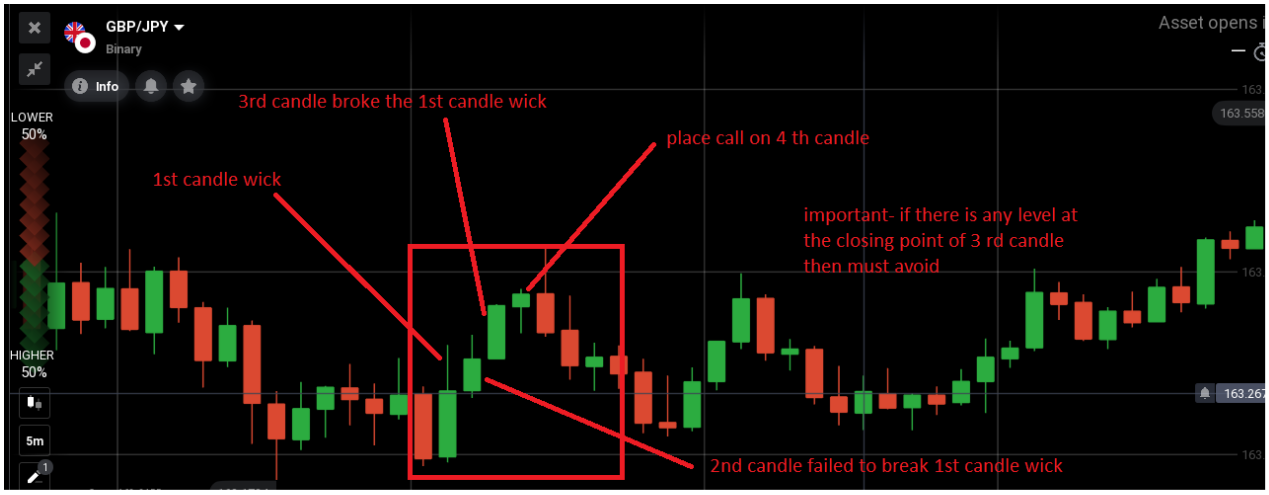

# Error candles

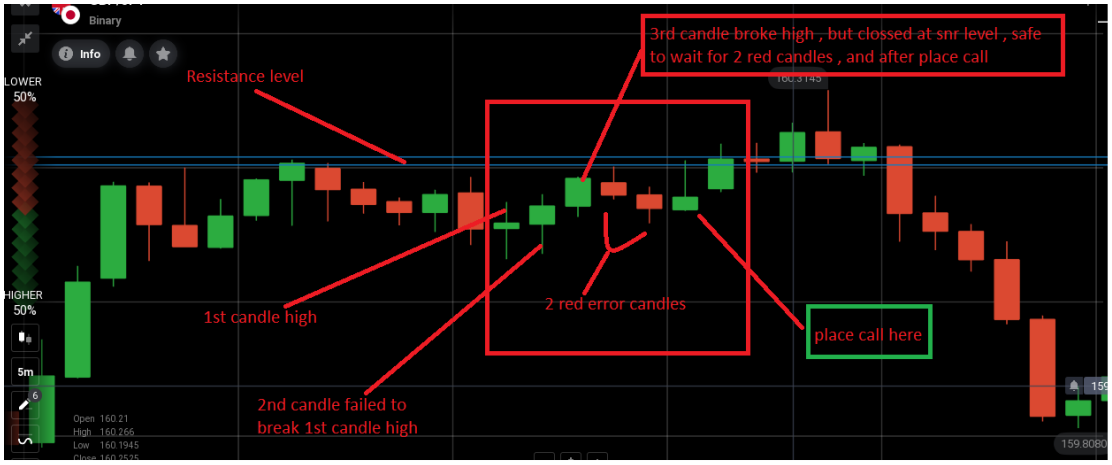

Binary

# Example for call opportunity

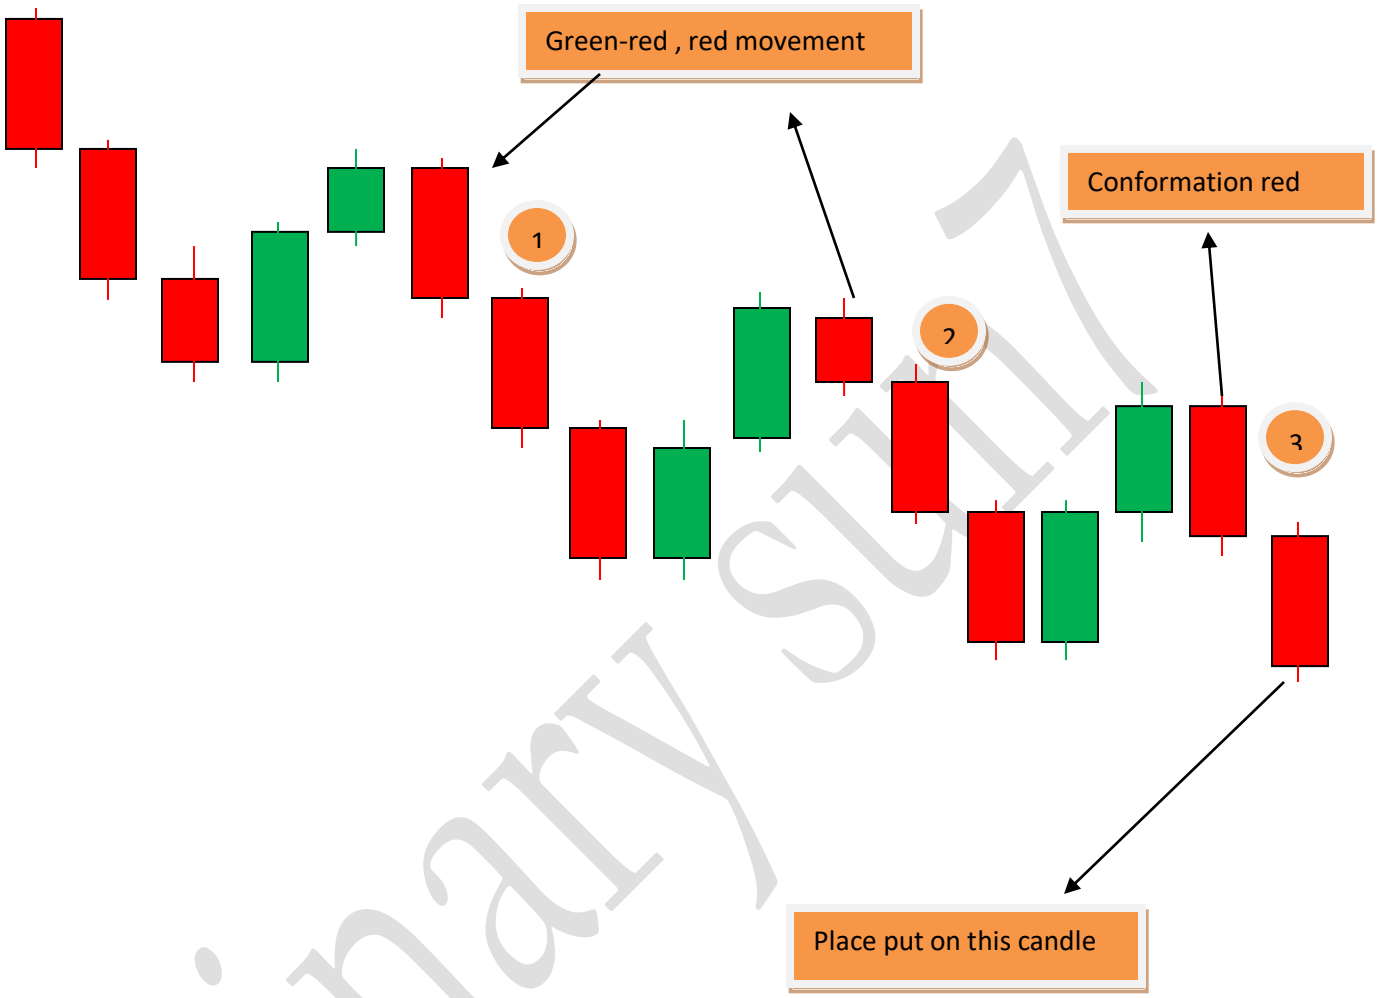

Must study examples properly

# Green -Red- Red Pattern

Binary sur7

In the above chart , after buyers entry every time can see minimum 2 consecutive red candles . In the 3rd time if u get 1 red candle , (that will be our conformation candle)then can place a put option again . if any retracement candle form then can use 1 step martingale (IMPORTANT- if the retracement candle is a engulfing (bullish engulfing here) candle then don't use 1 step martingale , just avoid that trade is much better.

# Instructions

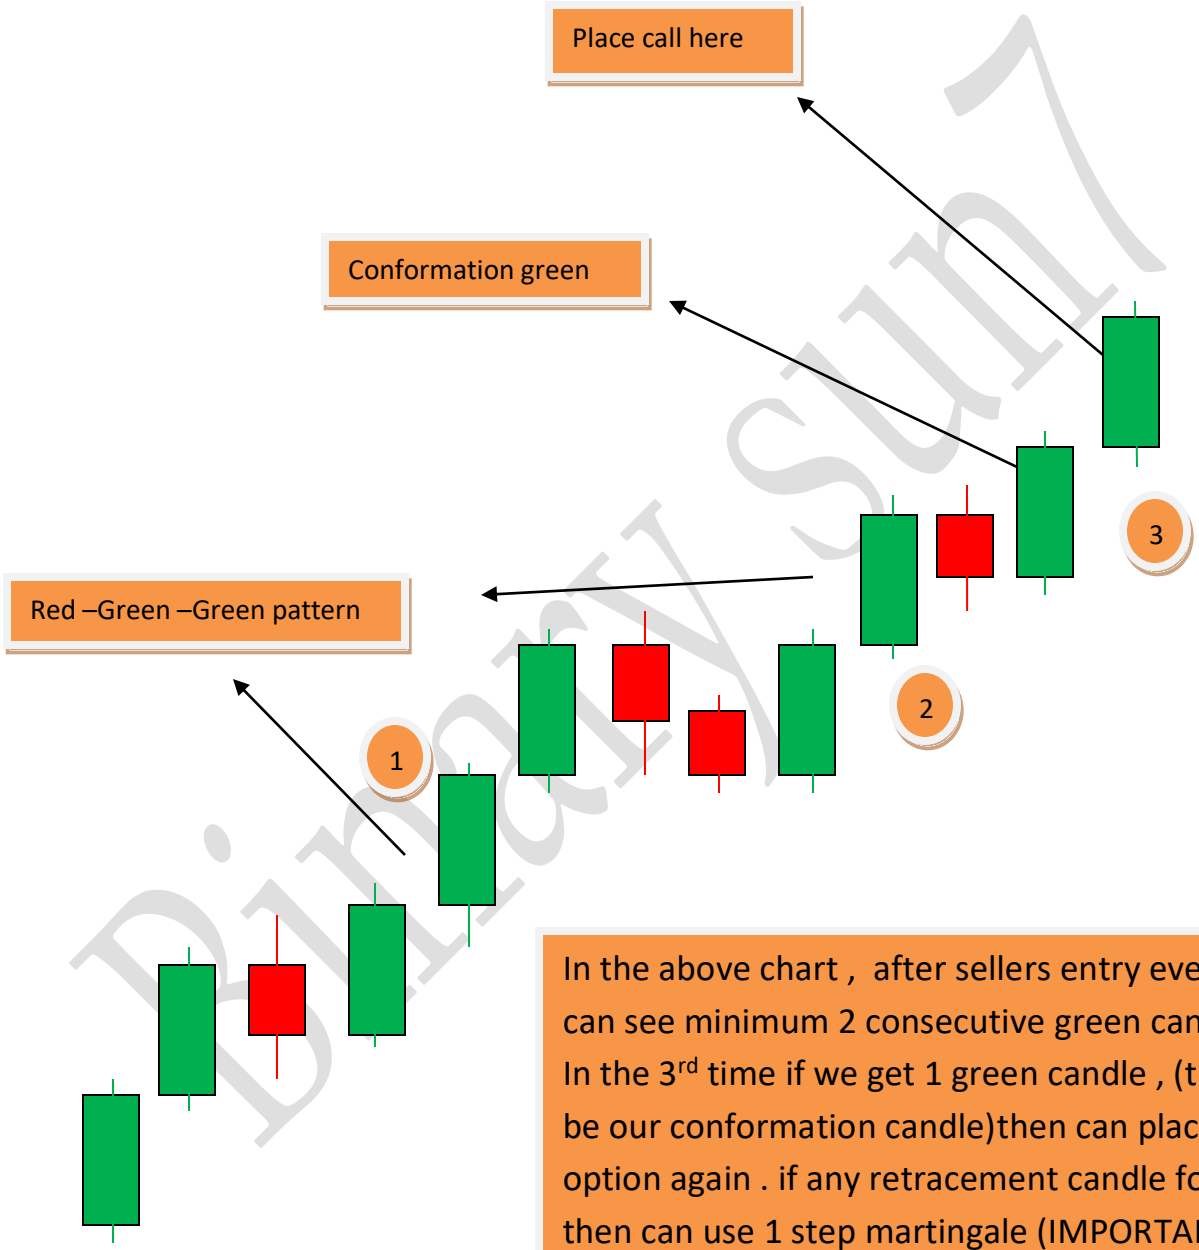

1. If the conformation candle closed at the SNR level then , don’t take that trade( wait for 1 or 2 error candle , after place your trade)
2. . if any retracement candle form then can use 1 step martingale (IMPORTANT- if the retracement candle is a engulfing candle then don’t use 1 step martingale , just avoid that trade is safe
3. Must avoid low volume markets( if many Doji  in this movements , then better to avoid)
4. If the conformation candle is a outside bar then , wait for 1 error candle , after only trade . don’t directly trade after an outside bar

# Structure Breakout Reversal Strategy

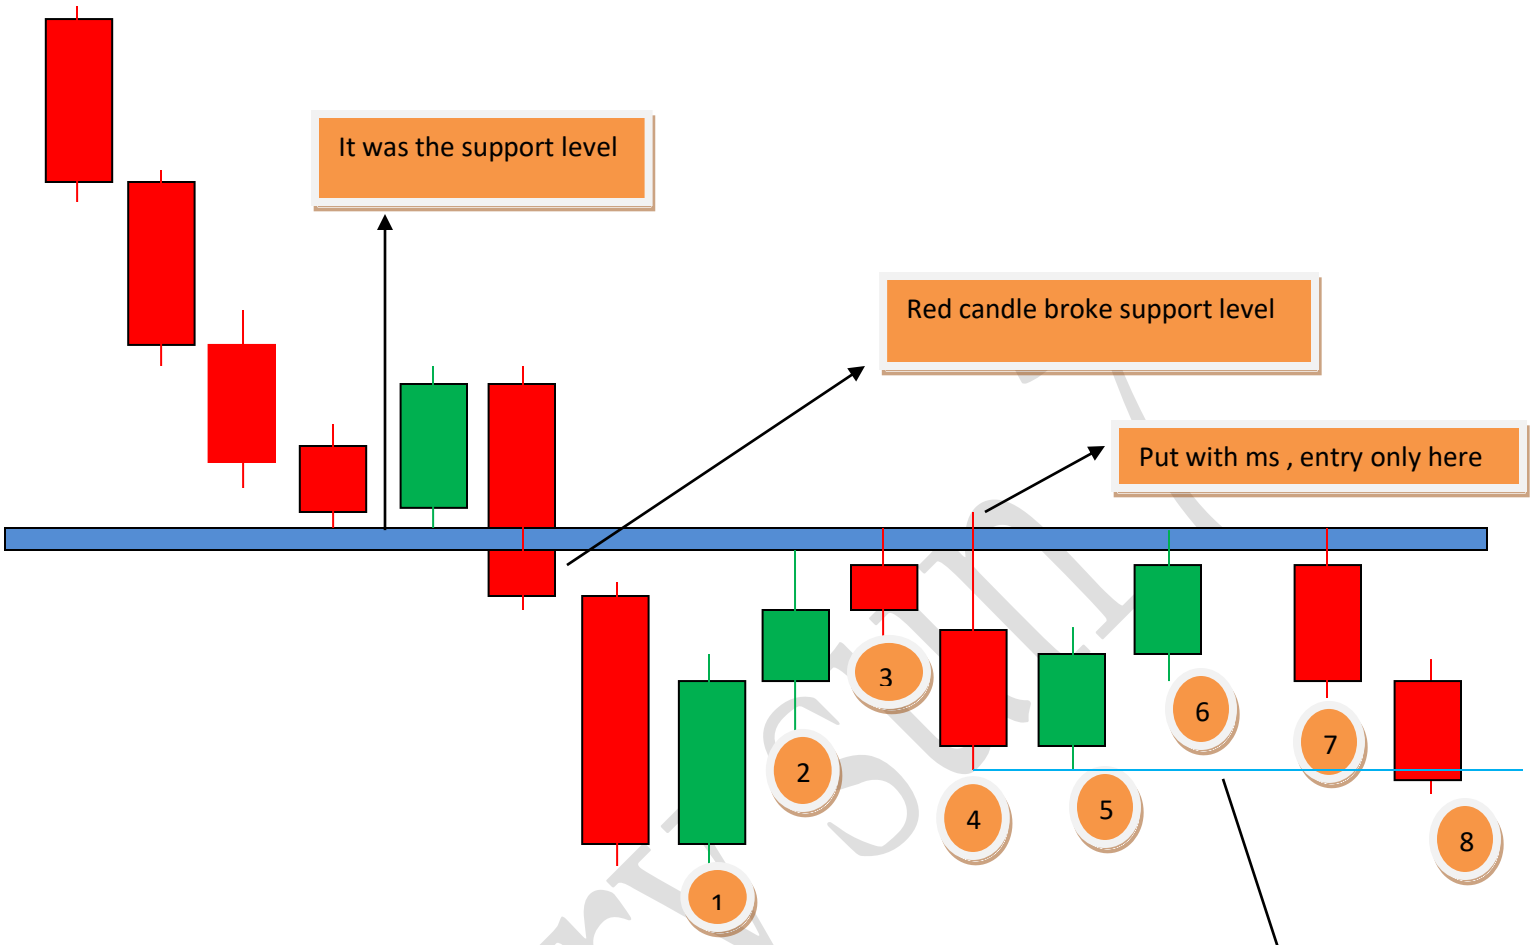

The Structure Breakout Reversal Strategy is one of the high accurate And also it's very common in the market. To use this trading method the market need to break the SNR level , and

we are trading at the time of retesting that level . The following image will help you to use this trading method properly. And also must read all of the instructions too … …..

The concept is simply means after breakout of support ,when it come back , chance to act as resistance and vice versa , can trade with the help of conformation candles

## LOOK AT THE BELOW CHART AND EXAMPLES

# Structure Breakout Sell opportunity

The above red candle broke that support area , and after that 2 buyers again try to broke that level (candle 1 and 2).. but failed and suddenly sellers entered on the candle 3. After that you can place a put option in candle 4 , but must wait for a margin of safety entry , only place at the above of resistance level (sometimes buyers may chance to make 1 error candles here and after only sellers will enter.

And after 2 buyers again entered to broke that level , but now also they failed ( candle 5 and 6)… And candle 7 is your conformation candle to go with sellers ..

You can place a put option on the candle 8

IMPORTANT- if the closing point of your conformation candle is(7) at the opening point of that 2 buyers point(5) – marked with blue line) . then that may chance to act as support , so avoid if the closing point is at any support

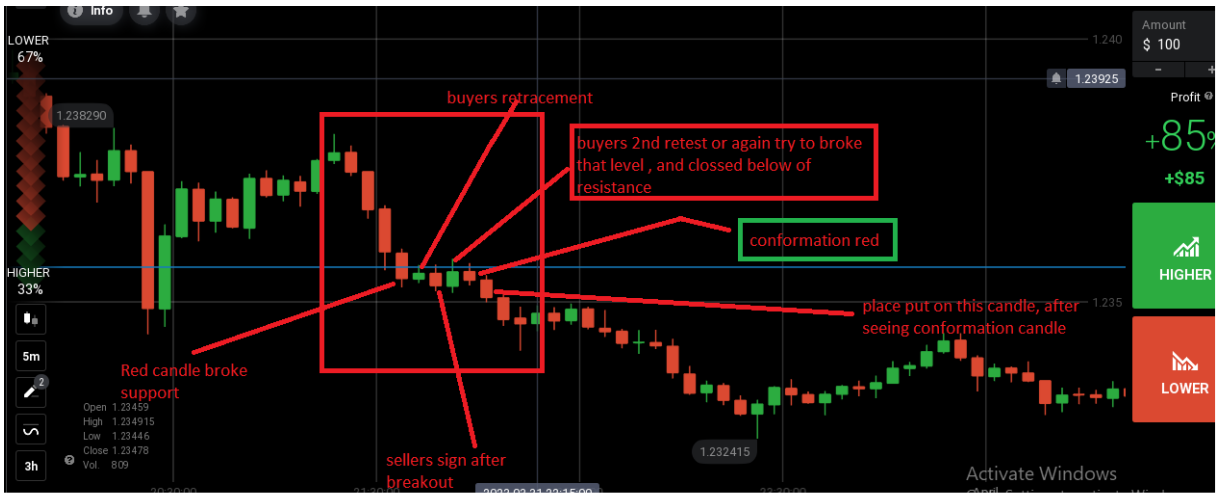

# INSTRUCTIONS

1. Use this trading method only after a proper breakout
2. After breakout (B/o of support ) ,the buyers may chance to RE break (B/o of resistance). So if the closing point of candle 3 (in this image) above of that resistance , then must avoid
3. If your conformation candle closed at any of the support area  then must avoid that trade
4. You can use 1 step martingale
5. After getting your conformation candle then only place put
6. Must check the explanations of the examples
7. This trading setup is very common in the ranging markets
8. Don’t use in narrow consolidation  area
9. The concept is simply means after breakout of support ,when it come back , chance to act as resistance and vice versa , can trade with the help of conformation candles
